1 General information

1.1 Version history

Version	Date	Changes
v0	10.02.2020	Publication

1.2 Instructions

This manual contains important information, instructions, application diagrams (max. sash sizes and weights) and assembly instructions for the installation, maintenance and operation of hardware.

The information and instructions contained in this document refer to products belonging to the Roto hardware system named on the front page.

All steps must be completed in sequence.

The following documents apply in addition to these instructions:

- Catalogue
 - Roto NX: CTL_105
 - Roto NT: CTL_7
 - Handles: CTL_1

The following guidelines also apply:

- Guideline TBDK issued by the Gütegemeinschaft Schlosser und Beschläge e. V. quality assurance association (Attachment of supporting fitting components for turn-only and tilt&turn fittings),
- Directive VHBE issued by the Gütegemeinschaft Schlosser und Beschläge e. V. quality assurance association (Hardware for windows and balcony doors – Guidelines / advice for end-users),
- Directive VHBH issued by the Gütegemeinschaft Schlosser und Beschläge e. V. quality assurance association (Hardware for windows and balcony doors – Guidelines / advice on the product and on liability),
- Directive FPKF issued by the Gütegemeinschaft Schlosser und Beschläge e. V. quality assurance association (Restrictor and cleaning stays for Tilt-Only sashes and Tilt-Only fanlights),
- Instructions and information issued by profile manufacturers (e.g. manufacturers of windows and balcony doors),
- The applicable regulations, directives and national laws.

Compliance with the following guidelines is additionally recommended:

- TLE.01 by the VFF (German Window and Facade Association) Correct handling of ready-to-install windows and external doors during transport, storage and installation,
- WP.01 by the VFF (German Window and Facade Association) Maintenance of windows, facades and external doors – Maintenance, care and inspection – Information for sales,
- WP.02 by the VFF (German Window and Facade Association) Maintenance of windows, facades and external doors – Maintenance, care and inspection – Measures and documents,
- WP.03 by the VFF (German Window and Facade Association) Maintenance of windows, facades and external doors – Maintenance, care and inspection – Maintenance agreement.

Storing the instructions

These instructions are an important part of the product. The instructions must be stored so that they are always to hand.

Explanation of the markings

The manual uses the following markings for emphasis (e.g. in figures or instructions):

Marking	Meaning
	Sash
	Frame
	Drill holes, routing or screw positions
	Unaffected components
	Indirectly affected components
	Components that have just been described
	Arrows or movements
[1]	Item number
[1]	Legend
[A]	Steps

INFO

Any dimensions without a unit in the instructions are given in millimetres (mm). Other units of measurement are clearly indicated by the presence of the differing unit.

INFO

Figures are provided in the right-hand version (DIN 107).

1.3 Symbols

Symbol	Meaning
	First-level list
□	Second-level list
	(Cross-)reference
	Result
	Unnumbered step
1.	Numbered step
a.	Numbered second-level step
⇒	Requirement

1.4 Pictographs

Symbol	Meaning
	Turn-Only / Tilt&Turn floating-mullion sash window
	Turn-Only window

Symbol	Meaning
	Tilt&Turn window
	Sash rebate width
	Sash rebate height
	Sash weight
	Tilt-Only window
	PVC

1.5 Product features

Symbol	Meaning
	Hardware axis
	Description
	Base
	DIN left / right
	Integrated corner drive
	Rebate clearance
	Sash rebate width
	Sash rebate height
	Sash weight
	Fixed handle height
	Centred / variable handle height
	Size

Symbol	Meaning
	Information
	Fixed toggle lever position
	Centred / variable toggle lever position
	Couplable
	Length
Nº	Material number
	Installation type
	Lifting mishandling device
	Surface
	Position
	Profile
	Number of welded-on strikers
	Number of locking cams
	Type of locking cams
	Security class
	Bullet catch
	System
	Adjustment

1.6 Abbreviations

Abbreviation	Meaning
GC	Gasket compression
CTL	Catalogue
DIN L / R	DIN left / right
d _k	Screw head diameter
T&T	Tilt&Turn
BS	Backset
SRW	Sash rebate width
SRH	Sash rebate height
S.kg	Sash weight
HH	Handle height
BSec	Basic security
IMO	Installation instructions
Y	Yes
kg	Kilograms
KU	Couplable
mm	Millimetres
CL	Centre lock
N	No
Nm	Torque in newton metres
LMD	Lifting mishandling device
RC	Resistance class
BC	Bullet catch
SEC	Security
ST	Striker

1.7 Target groups

The information in this document is directed at the following target groups:

Hardware dealers

The “hardware dealers” target group includes all companies and individuals that purchase hardware from hardware manufacturers for resale, without modifying or further processing the hardware.

Window and balcony door manufacturers

The “window and balcony door manufacturers” target group includes all companies and individuals that purchase hardware from hardware manufacturers or hardware dealers and further process the hardware by integrating it in windows and balcony doors.

Building element dealers or installation companies

The “building element dealers or installation companies” target group includes all companies and individuals that purchase windows and balcony doors from window and balcony door manufacturers for resale and for installation in construction projects, without modifying the windows or balcony doors.

Builders

The “builders” target group includes all companies and individuals who place orders for the manufacture of windows and balcony doors for installation in their construction projects.

End users

The "end users" target group includes all individuals who use the installed windows and balcony doors.

1.8 Target groups' obligation to give instructions

INFO

Each target group must fulfil their obligation to give instructions in full.

Unless specified otherwise in the text below, documents and information can be passed on as a printed document, on a data storage device or via the Internet.

Responsibility of hardware dealers

Hardware dealers must pass the following documents on to the window and balcony door manufacturer:

- Catalogue
- Installation, maintenance and operation instructions
- Directive on attachment of supporting fitting components for turn-only and tilt&turn fittings (TBDK)
- Guidelines/advice on the product and on liability (VHBH)
- Guidelines/advice for end-users (VHBE)

Responsibility of the window and balcony door manufacturer

The window and balcony door manufacturer must pass the following documents on to building element dealers or the builder, even if a subcontractor (installation company) is involved:

- Installation, maintenance and operation instructions
- Directive on attachment of supporting fitting components for turn-only and tilt&turn fittings (TBDK)
- Guidelines/advice on the product and on liability (VHBH)
- Guidelines/advice for end-users (VHBE)

They must ensure that the end users are provided with the documents and information intended for them in printed format.

Responsibility of building element dealers and the installation company

Building element dealers must pass the following documents on to the builder, even if a subcontractor (installation company) is involved:

- Installation, maintenance and operation instructions (with a focus on hardware)
- Guidelines/advice on the product and on liability (VHBH)
- Guidelines/advice for end-users (VHBE)

Responsibility of the builder

The builder must pass the following documents on to the end user:

- Installation, maintenance and operation instructions (with a focus on hardware)
- Guidelines/advice for end-users (VHBE)

1.9 Copyright protection

The contents of this document are copyright-protected. This content can be used when working with the hardware. Any other use is not permitted without written permission of the manufacturer.

1.10 Limitation of liability

All information and instructions contained in this document have been compiled in consideration of the applicable standards and regulations, the latest developments in technology and many years of knowledge and experience.

The hardware manufacturer assumes no liability for damage caused by:

- Failure to comply with this document and all product-specific documents and other applicable directives (see the chapters entitled "Security" and "Stipulated use").
- Improper use / misuse (see the chapters entitled "Security" and "Stipulated use").
- Insufficient invitation to tender, non-compliance with installation specifications and non-compliance with the application diagrams (where available).
- Increased contamination.

Claims made by third parties against the hardware manufacturer on account of damage resulting from misuse or failure to comply with the obligation to give instructions on the part of hardware dealers, window, door and balcony door manufacturers and building element dealers or the builder are passed on accordingly.

The obligations agreed in the delivery contract, the general terms and conditions, the hardware manufacturer's terms and conditions of delivery and the legal provisions applicable when the contract was concluded shall apply.

The warranty only covers original Roto components.

We reserve the right to make technical changes as part of improvement to performance characteristics and further development.

1.11 Preserving the surface finish

ATTENTION

Surface treatments may cause property damage.

Surface treatments (e.g. painting and varnishing) on elements can damage components or prevent them from working properly.

- ▶ For masking, only use adhesive tape that does not damage the paint coats. Consult the manufacturer if in doubt.
- ▶ Protect components against direct contact with the surface treatment.
- ▶ Protect components against contamination.

ATTENTION

Using incorrect cleaning agents and sealing compounds may cause property damage.

Cleaning agents and sealing compounds may damage the surfaces of components and gaskets.

- ▶ Do not use aggressive or flammable liquids, acidic cleaners or abrasive cleaners.
- ▶ Only use mild, pH-neutral cleaning agents that have been diluted.
- ▶ Apply a thin protective film to the components, for example using a cloth soaked in oil.
- ▶ Avoid aggressive vapours (e.g. produced by formic acid, acetic acid, ammonia, amine compounds, ammonia compounds, aldehyde, carbolic acid, chlorine, tannic acid) around the element.
- ▶ Do not use any acetic acid-crosslinking or acid-crosslinking sealing compounds or those with the aforementioned constituents as both direct contact with the sealing compound and its fumes can corrode the surface of the components.

ATTENTION

Contamination may cause property damage.

Contamination prevents components working properly.

- ▶ Remove deposits and contamination caused by construction materials (e.g. plaster, gypsum).
- ▶ Keep components free of deposits and contaminants.

ATTENTION

(Permanently) damp room air may cause property damage.

Damp room air can lead to mould growth and corrosion caused by condensation.

- ▶ Provide adequate ventilation for components, particularly during the construction phase.
- ▶ Intensively air out the room several times per day by opening all elements for approximately 15 minutes. If intensive airing is not an option, place the elements in the tilt position and provide airtight masking inside the room, e.g. if there is fresh screed that cannot be walked on or must not be exposed to draughts. Discharge any humidity present in the room air to the outside using condensation dryers.
- ▶ Establish a ventilation plan for more complex construction projects if necessary.
- ▶ Provide adequate ventilation during holiday periods as well.

2 Security

This manual contains instructions relating to safety. The principal safety information in this chapter includes information and instructions relevant to the safe use or maintaining the safe condition of the product. Warning instructions that relate to handling warn of residual risks and are located before steps that are relevant to safety.

- ▶ Follow all of the instructions in order to prevent personal injury and property and environmental damage.

2.1 Presentation and structure of warning instructions

The warning instructions relate to individual actions and are structured as follows with a warning symbol:

DANGER

Nature and source of the danger.

Explanation and description of the danger and the implications.

- ▶ Measures to take to avert the danger.

2.2 Security levels of warning instructions

The warning instructions that relate to handling are identified differently according to the severity of the associated danger. The signal words and the associated warning symbols used are clarified below.

DANGER

Immediate risk of death or serious injuries.

- ▶ Observe these warning instructions to avoid personal injuries.

WARNING

Potential risk of death or serious injuries.

- ▶ Observe these warning instructions to avoid personal injuries.

CAUTION

Risk of injuries

- ▶ Observe these warning instructions to avoid personal injuries.

ATTENTION

Reference to property or environmental damage.

- ▶ Observe these warning instructions to avoid property or environmental damage.

2.3 Stipulated use

Turn-Only and Tilt&Turn hardware components are one-hand operation, Turn-Only and Tilt&Turn hardware components for windows and balcony doors in structural engineering. This hardware is used to move window sashes and balcony door sashes to a turned position by actuating a hand lever or a tilt position which is restricted by the scissor stay version. Turn-Only and Tilt&Turn hardware components may be used on vertically installed windows and balcony doors made of timber, PVC, aluminium or steel, or corresponding combinations of the aforementioned materials. Turn-Only and Tilt&Turn hardware components in the sense of this definition close windows and balcony door sashes or move them into various ventilation positions.

During the closing process, the gasket counter force must generally be overcome.

Stipulated use also includes compliance with all safety information and specifications contained in these instructions, the other applicable documents and the applicable regulations, directives and national laws.

2.3.1 Misuse

Any use and processing of the products that goes beyond or differs from the stipulated use is considered misuse and can lead to hazardous situations.

WARNING

Misuse may pose a risk of death!

Misuse and incorrect installation of hardware can lead to serious injuries.

- ▶ Only use hardware combinations that have been approved by the hardware manufacturer.
- ▶ Only use original accessories or those that have been approved by the hardware manufacturer.
- ▶ Note the product-related documentation → *from page 10*.

2.3.2 Usage restriction

Opened sashes in windows and balcony doors, and windows and balcony door sashes that are unlocked or placed in ventilation positions, only have a shielding effect. They do not meet the following requirements:

- Joint sealing
- Driving rain impermeability
- Sound insulation
- Thermal insulation
- Burglary inhibition

INFO

Windows built with security strikers for tilt ventilation fulfil the burglary inhibition function in tilt mode.

2.4 Stipulated use for end users

For windows or balcony doors with Turn-Only or Tilt&Turn hardware, windows or balcony door sashes can be moved to a turned position by operating a hand lever or to a tilt position restricted by the scissor stay version.

When closing a sash and locking the hardware, the gasket counter force must generally be overcome.

WARNING

Opening and closing sashes in an uncontrolled manner may pose a risk of death!

Opening and closing the sash in an uncontrolled manner may lead to serious injuries.

- ▶ Ensure that the sash does not collide with the frame, opening restrictor (buffer) or other sashes when it is moved into the fully open or closed position.
- ▶ Ensure that the sash is slowly guided by hand throughout its entire movement range, until it has been brought into a fully closed or opening position.

Security

Basic safety information

Misuse

ATTENTION

Opening and closing sashes in an uncontrolled manner may result in property damage.

Opening and closing the sash in an uncontrolled manner may cause the element to malfunction.

- ▶ Ensure that the sash does not collide with the frame, opening restrictor (buffer) or other sashes when it is moved into the fully open or closed position.
- ▶ Ensure that the sash is slowly guided by hand throughout its entire movement range, until it has been brought into a fully closed or opening position.

Any use and processing of the products that goes beyond or differs from the stipulated use is considered misuse and can lead to hazardous situations.

No claims of any kind can be made on account of damage resulting from failure to comply with the stipulated use.

2.4.1 Misuse

Any use and processing of the products that goes beyond or differs from the stipulated use is considered misuse and can lead to hazardous situations.

WARNING

Misuse may pose a risk of death!

Misuse and incorrect installation of hardware can lead to serious injuries.

- ▶ Only use hardware combinations that have been approved by the hardware manufacturer.
- ▶ Only use original accessories or those that have been approved by the hardware manufacturer.
- ▶ Note the product-related documentation → *from page 10*.

2.5 Basic safety information

The following hazards may arise when handling the product:

2.5.1 Installation

Incorrect installation poses an immediate risk of death or serious injuries.

Incorrect installation or assembly of hardware can lead to hazardous situations or property damage. Depending on the height of the fall, this can result in serious to life-threatening injuries and glass breakage.

- ▶ Only use hardware combinations that have been approved by the hardware manufacturer.
- ▶ Only use original accessories or those that have been approved by the hardware manufacturer.
- ▶ Always have installation performed by a specialist company.

Heavy loads pose a risk of injury.

Lifting and carrying heavy loads may lead to injuries in the event of a fall or physical overexertion.

- ▶ Note the applicable accident prevention regulations.

- ▶ Transport heavy loads with two people and use suitable transportation means (such as an industrial truck).

Physical strain may cause damage to health.

Moving heavy loads for extended periods leads to physical injury in the long term.

- ▶ When carrying and lifting by hand, comply with a maximum weight of 25 kg for men and 10 kg for women.
- ▶ Carry and lift even small loads with an ergonomically correct posture.

2.5.2 Use

Falls from open windows and balcony doors present an immediate risk of death and pose the risk of serious injuries.

Opened sashes of windows and balcony doors create a danger zone. Depending on the height of the fall, this can result in serious to life-threatening injuries and glass breakage.

- ▶ Take care when in the vicinity of open windows and balcony doors.
- ▶ Keep children and anyone unable to understand the risks away from the hazardous area.

Trapping body parts in the opening between sash and frame may lead to serious injuries.

Gripping between the sash and frame when closing windows and balcony doors poses the risk of crushing injuries.

- ▶ When closing windows and balcony doors, never grip between the sash and frame and always exercise caution.
- ▶ Keep children and anyone unable to understand the risks away from the hazardous area.

Opening and closing sashes improperly poses the risk of injury and property damage.

Incorrect opening and closing of sashes can result in serious injuries and substantial property damage.

- ▶ When moving the sash, ensure that it will not slam against the frame or other sashes once fully opened or closed.
- ▶ Ensure that the sash is slowly guided by hand throughout its entire movement range, until it has been brought into a fully closed or opening position.
- ▶ When closing a sash and locking the hardware, the gasket counter force must be overcome.

Misuse poses a risk of injury and property damage.

Misuse can lead to hazardous situations and may destroy the hardware, frame materials or other individual components within the windows or balcony doors.

- ▶ Do not introduce any obstacles in the opening area between the frame and window or balcony door sashes.
- ▶ Do not place additional loads on windows and balcony door sashes.

Security

Operation

Ambient conditions

- ▶ Refrain from intentionally or uncontrollably slamming or pushing the window or balcony door sash against the window reveal.

Improper maintenance poses the potential risk of injury and property damage.

Windows and balcony doors, including the hardware, require expert maintenance (care, cleaning, maintenance and inspection) in order to guarantee their proper condition and safe use.

- ▶ Keep the hardware free of deposits and contaminants.
- ▶ Carry out care and cleaning tasks as specified in these instructions.
- ▶ Always have regular maintenance, adjustment and repair work carried out by a specialist company.

2.5.3 Ambient conditions

Physical and chemical influences may result in property damage.

Hardware components can be permanently damaged to the point that they can no longer function in a saline, aggressive or corrosive environment.

- ▶ Do not use the hardware components in a saline, aggressive or corrosive environment.
- ▶ Carry out care and cleaning tasks as specified in these instructions.
- ▶ Corrosion protection must be inspected by an authorised specialist company as part of regular maintenance work.

Moisture may cause property damage.

Depending on the outside temperature, relative humidity of the room air and installation conditions for the windows and balcony doors, a temporary build-up of condensation may occur. This can lead to corrosion on the hardware and mould growth on the frame or wall. Ambient conditions that are too damp, particularly during the construction phase, can lead to timber elements warping.

- ▶ Avoid preventing the circulation of air (e.g. due to deep reveals, curtains and unfavourable positioning of heaters or the like).
- ▶ Intensively air out the room several times per day.
Open all windows and balcony doors for approximately 15 minutes so that the air in the room can be completely replaced.
- ▶ Provide adequate ventilation during holiday periods as well.
- ▶ Create a ventilation plan for construction projects if necessary.

2.6 Operation

The safety symbols and markings and the associated warning instructions explained below apply to the safe operation of windows and balcony doors.

Safety symbols and markings

Symbol	Meaning
	<p>Falls from open windows and balcony doors present an immediate risk of death and pose the risk of serious injuries.</p> <p>Take care when in the vicinity of open windows and balcony doors.</p> <p>Keep children and anyone unable to understand the risks away from the hazardous area.</p>

Symbol	Meaning
	<p>Trapping body parts in the opening between sash and frame may lead to serious injuries.</p> <p>When closing windows and balcony doors, never grip between the sash and frame and always exercise caution.</p> <p>Keep children and anyone unable to understand the risks away from the hazardous area.</p>
	<p>Placing additional loads on the sash may lead to minor injuries and property damage.</p> <p>Avoid placing additional loads on the sash.</p>
	<p>The impact of wind may lead to minor injuries and property damage.</p> <p>Avoid exposing the open sash to wind.</p> <p>Close and lock the window and balcony door sash in windy or draughty conditions.</p>
	<p>Introducing obstacles into the opening between sash and frame may result in minor injuries and property damage.</p> <p>Avoid introducing obstacles into the opening between sash and frame.</p>
	<p>Pressing the sash against the edge of an opening (reveal) may pose a risk of minor injuries and cause property damage</p> <p>Refrain from pressing the sash against the edge of an opening (reveal).</p>

3 Information on the product

3.1 General hardware characteristics

- Fully concealed central locking system in the sash rebate with single-handed operation:
 - Profiled faceplate
 - Effortless and low-wear operation thanks to adjustable locking cams guided over the surface
 - Simple adjustment options for lateral and height adjustment; additional gasket compression adjustment via:
 - E locking cam: gasket compression adjustable eccentric cam
 - P locking cam: gasket compression adjustable security eccentric cam
 - V locking cam: gasket compression and height adjustable security eccentric cam
 - Link-guided stay arm, as standard with:
 - Integrated anti-slam device (Tilt&Turn version only)
 - Safeguard against incorrect operation in the tilt position (Tilt&Turn version only)
 - Variable tilt distance restriction (80 – 140 mm, Tilt&Turn version only)
 - Turn restriction
 - Fully concealed stay bearing and pivot rest in the sash rebate.
 - 3D adjustment in the stay arm / corner hinge / pivot rest.
 - Lasting and reliable load relief on the pivot rest.
 - Form-fitting "Clip&Fit" connection.
 - With burglar inhibiting anti-jemmy device in the tilt striker as standard.
 - Low-maintenance thanks to grease deposit recesses.
 - Tested in accordance with EN 13126-8 and EN 1191 and certified in accordance with QM 328.
 - High-quality Roto Sil surface (matt silver) for maximum corrosion resistance (DIN EN 13126 / 8 and free from chromium VI compounds).
- In combination with Roto Sil, Roto Sil Level 6 is an advanced standard for connection components subject to high stress, such as rivets, bolts and sliding elements.
- Ten-year warranty for the functionality of the hardware.

3.2 General information

Hardware functional safety

The following points must be noted in order to ensure the functional safety of the hardware at all times:

1. Correct installation of hardware components in accordance with the installation instructions.
2. Correct installation of elements during window installation.
3. The window manufacturer must pass the maintenance and operation instructions and the product liability guidelines (if applicable) on to the user.
4. The hardware as a whole may only consist of original Roto system components. The use of components from other manufacturers excludes any liability.

Product liability regulations

Electrogalvanised and passivated steel fenestration screws are to be used to fasten the hardware components.

The window manufacturer must ensure that the hardware components are adequately secured; the screw manufacturer must be involved if required.

When attaching security-relevant, load-bearing hardware components such as stay bearings and pivot rests, the pulling forces vertical to the sash plane must be achieved in accordance with the following table (tractive force values depending on the sash weights from the TBDK).

Sash weight	Tractive force in newtons (N)
60 kg	1650 N
70 kg	1900 N
80 kg	2200 N
90 kg	2450 N
100 kg	2700 N
110 kg	3000 N
120 kg	3250 N

Sash weight	Tractive force in newtons (N)
130 kg	3500 N
140 kg	3900 N
150 kg	4200 N

The stated values refer to the stay bearing. They also apply to the pivot rest if it is attached in the same way as the stay bearing.

INFO

Observe directive TBDK for tractive force values as a function of the sash weights.

Further information can be found at www.beschlagindustrie.de.

Do not use any acid cross-linked sealing compounds that could lead to corrosion of the hardware components. The spacer block guidelines for glazing methods must be complied with.

Product liability – liability exclusion

The hardware manufacturer is not liable for malfunctions or damage to the hardware, or to windows and balcony doors equipped with the hardware, if this has been caused by insufficient invitation to tender or failure to comply with the installation specifications and application diagrams, or if the hardware has been subjected to increased levels of dirt.

The warranty only covers original Roto components.

Profile classification – application ranges

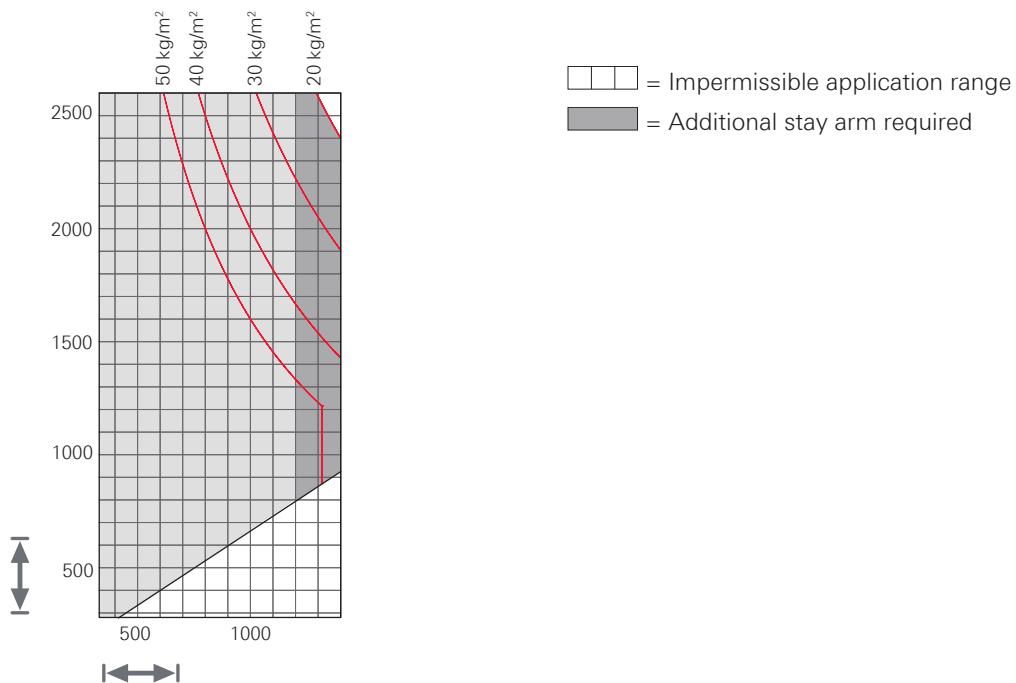

The individual application diagrams must be complied with.

When determining the maximum permitted sash formats and sash weights, the values specified by the profile manufacturers and system owners must not be exceeded either.

3.3 Application diagrams

3.3.1 Turn-Only / Tilt&Turn hardware for rectangular windows

3.3.1.1 80 kg

Application range

	Sash rebate width	Basic security	Security	Security
			RC 1 N	RC 2 / RC 2 N
	Sash rebate height	330 – 1400 mm	450 – 1400	450 – 1400
	Sash weight	280 – 2600 mm	280 – 2600	490 – 2400

The specifications in the application diagram refer to the glass weight in kg/m².

1 mm/m² glass thickness ≈ 2.5 kg

3.3.1.2 100 kg

Application range

		Basic security	Security RC 1 N	Security RC 2 / RC 2 N
	Sash rebate width	600 – 1400 mm	450 – 1400	450 – 1400
	Sash rebate height	400 – 2600 mm	280 – 2600	490 – 2400
	Sash weight	Max. 100 kg	Max. 100 kg	Max. 100 kg

The specifications in the application diagram refer to the glass weight in kg/m².

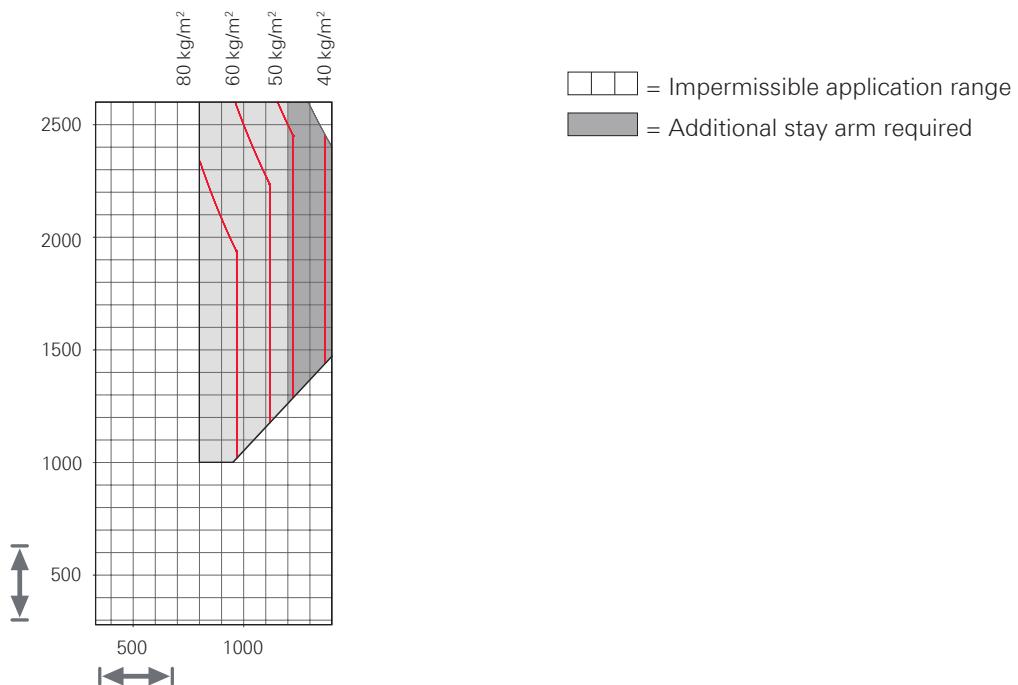

1 mm/m² glass thickness ≈ 2.5 kg

Information on the product

Application diagrams

Turn-Only / Tilt&Turn hardware for rectangular windows

3.3.1.3 Load transfer from 80 to 150 kg

Application range

	Basic security	Security RC 1 N	Security RC 2 / RC 2 N
Sash rebate width	800 – 1400 mm	800 – 1400	800 – 1400
Sash rebate height	1000 – 2600 mm	1000 – 2600	1000 – 2400
Sash weight	Max. 80 – 150 kg	Max. 80 – 150 kg	Max. 80 – 150 kg

The specifications in the application diagram refer to the glass weight in kg/m².

1 mm/m² glass thickness ≈ 2.5 kg

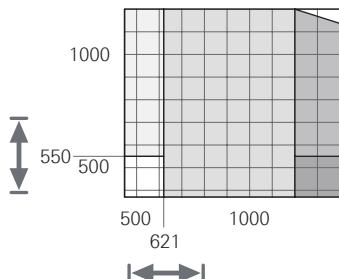

INFO

If the sash weight is > 130 kg, set the stay arm's tilt distance restrictor to 80 mm.

3.3.2 Tilt-Only hardware for rectangular windows

- = Impermissible application range
- = 2 tilt stays at the side
- = 1 tilt stay at the top
- = 2 tilt stays at the side or top
- = 2 tilt stays at the top

Application range

	Basic security
Sash rebate width	450 – 1400 mm
Sash rebate height	370 – 1200 mm
Sash weight	Max. 80 kg

The specifications in the application diagram refer to the glass weight in kg/m².

1 mm/m² glass thickness ≈ 2.5 kg

3.4 Frame clearances

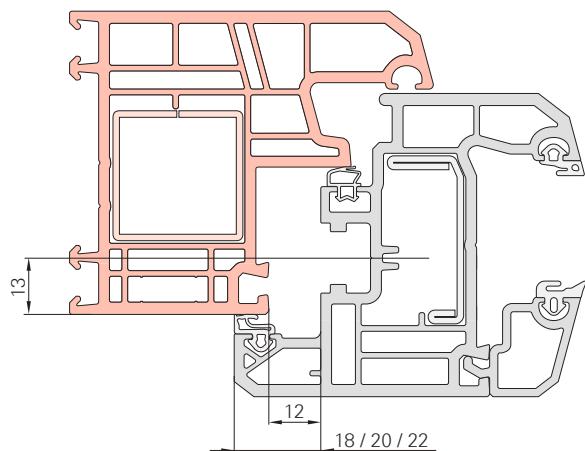

3.4.1 Frame clearances with a 90° opening angle

Axis dimension [A]	Overlap height [H]	Overlap width [B]	Frame clearance [X]
13	16	18	5.2
	20	18	7.6
	24	18	10.6
	16	20	4.9
	20	20	7.2
	24	20	9.9
	16	22	4.7
	20	22	6.8
	24	22	9.3

3.4.2 Dimensions

System 12/18 (20/22)-13

Rebate clearance at the bottom / top, horizontal: 11 - 14 mm

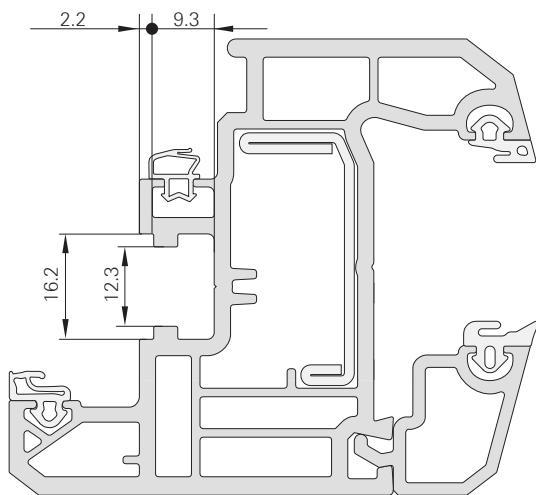

Rebate clearance at the side: 10 - 14 mm

INFO

Horizontal rebate clearance at the bottom, preset to 12 mm.

Sash profile cross section

3.5 Fastening suggestion for security windows

- [1] Brickwork
- [2] Spacer blocks
- [3] Frame

INFO

Attach spacer blocks in the vicinity of the screw fixings for the security strikers.

Burglar inhibiting windows in accordance with DIN EN 1627–1630 may only be designated as such if installation is performed in accordance with the specified standard in all points.

4 Hardware overviews

The hardware overviews on the following pages are a recommendation on the part of Roto Frank Fenster- und Türtechnologie GmbH.

The basic page layout in the hardware overviews chapter firstly shows examples of the combination of individual hardware components, and the associated parts list can be seen on the following pages.

Additional combinations of hardware components can be found in the catalogue.

The item numbers in the squares link the hardware overview to the parts list.

The actual composition of the hardware depends on:

- the height of the element
- the width of the element
- the weight of the element
- security class
- the profile system

INFO

Security classes

- The RC 1 N, RC 2, RC 2 N and RC 3 security classes refer to the entire system.
- The hardware combinations shown in the hardware overviews are recommendations.
- The hardware complies with the corresponding security classes in the required system tests.
- However, the security classes are only complied with if all of the other components in the system (e.g. profile system, reinforcement, glass, etc.) are also designed for this.
- Steel security locking components must generally be used in systems with a 9 mm hardware axis.

Profile-related frame components and general sets are listed in additional chapters.

Recommended handles can be found in the handles catalogue.

Determine the quantity of required hardware components with Roto Con Orders.

INFO

Roto Con Orders

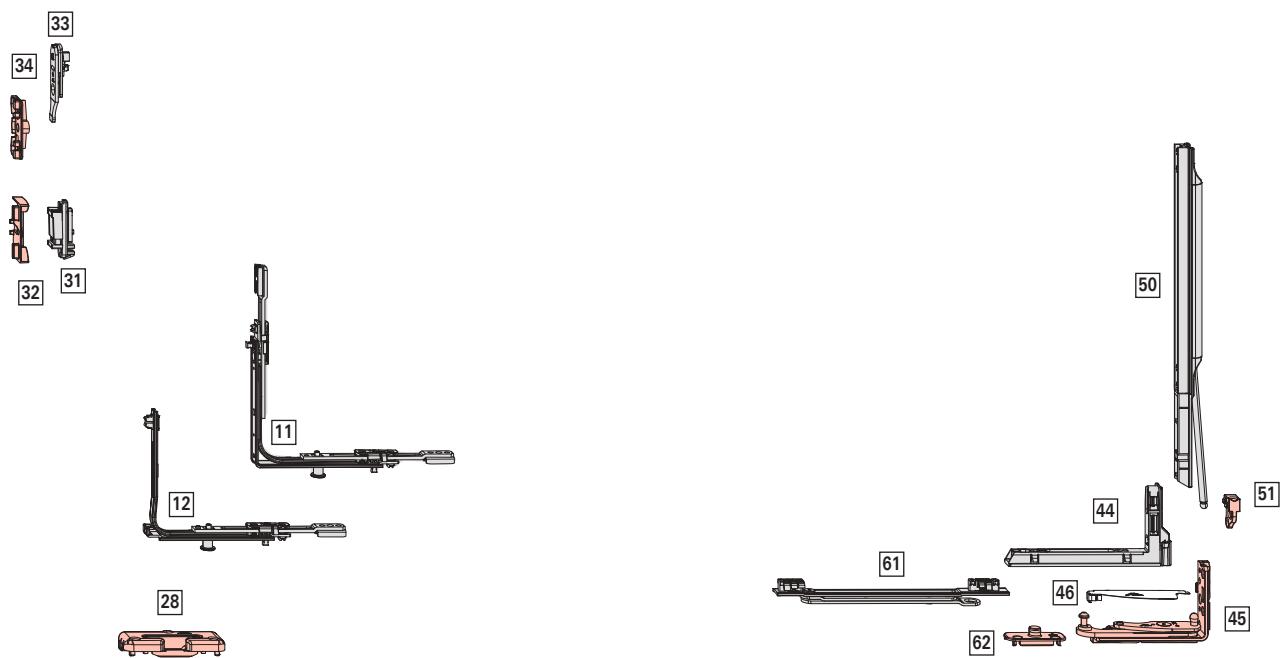

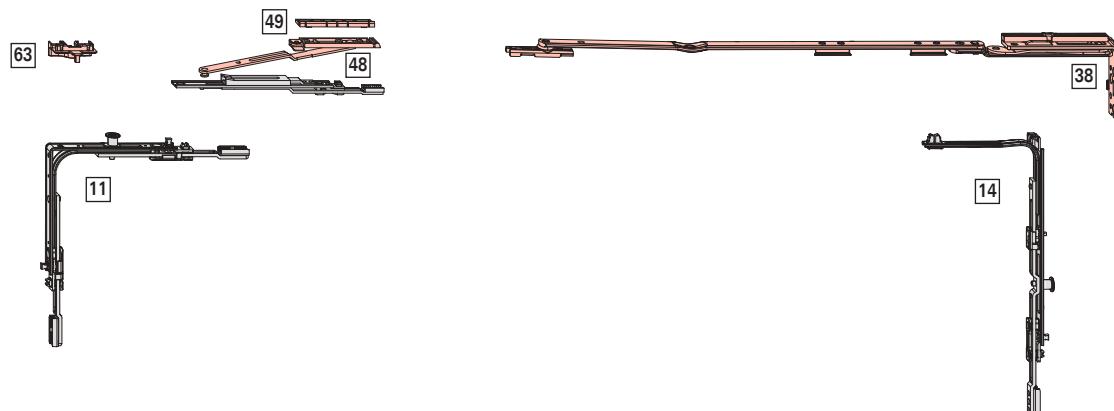

Efficient online hardware configurator for the custom configuration of individual window and door hardware components. All conventional shapes and opening types can be automatically configured quickly and easily. Individual parts lists, including application ranges and an exemplary hardware overview, can be ordered from your responsible sales representative.

5 T&T espagnolette / floating-mullion sash espagnolette

5.1 Standard

5.1.1 Possible combinations

Assignment	Meaning
[1]	Lever-operated espagnolette, standard
[2]	Floating-mullion centre lock
[3]	T&T espagnolette
[4]	Centre lock, standard
[5]	Corner drive, standard
[6]	Special corner drive, short

Determining the espagnolettes

1. Determine the element's sash rebate height (SRH)

INFO

Refer to the tables below for possible combinations and the required corner drive [5] + [6].

2. Select the lever-operated espagnolette, standard [1] using the *sash rebate height (SRH)* and *length of the component*

Optional: determine the floating-mullion centre lock [2]

3. Select the T&T espagnolette [3] using the *length of the component*

- T&T espagnolette – backset 8 mm
- T&T espagnolette – backset 15 mm
- T&T espagnolette – backset 25, 30, 35, 40, 45, 50 mm

Optional: determine the centre lock, standard [4]

**Fixed handle height**

Backset 8 mm

2001 – 2400	2180	880 – 1080	Corner drive, standard	2180				Corner drive, standard

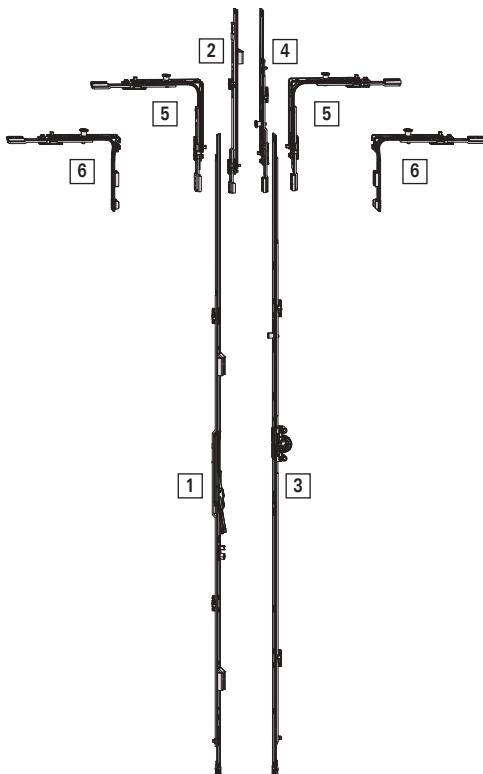

INFO

A centre lock is required from SRH 2401 mm.

5.2 Plus

5.2.1 Possible combinations

Assignment	Meaning
[1]	Lever-operated espagnolette Plus
[2]	Floating-mullion centre lock
[3]	T&T espagnolette
[4]	Centre lock, standard
[5]	Corner drive, standard
[6]	Special corner drive, short

Determining the espagnolettes

1. Determine the element's sash rebate height (SRH)

INFO

Refer to the tables below for possible combinations and the required corner drive [5] + [6].

2. Select the lever-operated espagnolette Plus [1] using the *sash rebate height (SRH)* and *length of the component*

Optional: determine the floating-mullion centre lock [2]

3. Select the T&T espagnolette [3] using the *length of the component*

- T&T espagnolette – backset 8 mm
- T&T espagnolette – backset 15 mm
- T&T espagnolette – backset 25, 30, 35, 40, 45, 50 mm

Optional: determine the centre lock, standard [4]

T&T espagnolette / floating-mullion sash espagnolette

Plus

Possible combinations

Fixed handle height

Backset of 8 mm and above

INFO

Recommended component for system testing (RC2 / RC2 N)

The TiltSafe protective support minimises the engagement area on the TiltSafe security strikers.

7.1.2.4 Turn-Only sash

				Nº
Turn-Only sash	801 – 1400	Top Bottom	No. 16	311893

7.1.3 Positioning jigs

1. Place the positioning jig [1] on the frame [2].

2. Position the frame components.

8 Installation

8.1 Processing instructions

Maximum sash sizes and weights

The specifications, application diagrams and component assignments which can be found in the hardware manufacturer's product-specific documents provide information on the maximum permitted sash sizes and weights. The component with the lowest permitted load bearing capacity determines the maximum permitted sash weight.

- Before using electronic data records and implementing them in window construction programs in particular, check that they match the specifications, application diagrams and component assignments.
- Never exceed the maximum permitted sash sizes and weights. If any points are unclear, contact the hardware manufacturer.

Specifications from profile manufacturers

The window and balcony door manufacturer must comply with all specified system dimensions (e.g. gasket gap dimensions or locking distances).

They must continue to ensure and check this on a regular basis, especially when new hardware components are used for the first time, during production and on a continuous basis, up to and including window installation.

INFO

The hardware components are always designed in such a way that any system dimensions affected by the hardware can be adjusted. The hardware manufacturer shall not be liable for any additional expenses incurred if a deviation from these dimensions is not discovered until after the windows have been installed.

Combining hardware

Burglar inhibiting windows and balcony doors need hardware which meets special requirements.

Windows and balcony doors for wet rooms and those for use in environments with aggressive, corrosive constituents in the air require hardware that meets special requirements.

The resistance of windows and balcony doors to wind loads when they are closed and locked depends on the individual design of the windows and balcony doors. The hardware system is capable of handling wind loads specified by legislation and standards (for example in accordance with EN 12210 – especially test pressure P3).

In general, the Turn-Only and Tilt&Turn hardware components defined in this document are capable of meeting statutory and normative requirements for accessible dwellings.

Coordinate suitable hardware combinations and installation procedures in windows and balcony doors with the hardware manufacturer and profile manufacturer for the areas listed above, and conclude a separate agreement for them.

INFO

The hardware manufacturer's specifications on the combination of hardware (e.g. the use of additional scissor stays, the design of hardware for burglar-inhibiting window sashes and balcony door sashes, etc.) are binding.

8.2 Screwdriving work

Electrogalvanised and passivated steel fenestration screws (\varnothing 3.9 – 4.2 x ...) are to be used to fasten the hardware components; in more challenging climatic conditions, use fenestration screws with additional sealing.

When attaching **security-relevant**, load-bearing hardware components such as **stay bearings** and **pivot rests**, the pulling forces horizontal to the sash plane must be achieved in accordance with the following table (tractive force values depending on the sash weights from the TBDK).

Sash weight in kg	Tractive force in N [1]
60	1650
70	1900
80	2200
90	2450
100	2700
110	3000
120	3250
130	3500
140	3900
150	4200

The stated values refer to the stay bearing. They also apply to the pivot rest if it is attached in the same way as the stay bearing.

INFO

Observe directive TBDK for tractive force values as a function of the sash weights.

Further information can be found at www.beschlagindustrie.de.

The spacer block guidelines for glazing methods must be complied with.

[1] Permissible tolerance -10%

8.2.1 Fastening suggestion for security windows

Fastening SEC strikers

3x screws 4x ... Through all walls if attachment through steel reinforcement is not possible.

Horizontal cross section M 1:2

Vertical cross section M 1:2

Glazing bead attachment

With screws if required.

8.3 Screw connections

DANGER

Incorrectly installed or screwed-in hardware components present a risk of death.

Incorrectly installed and screwed-in hardware components may lead to hazardous situations and cause serious or fatal accidents.

- ▶ During installation and screwdriving work, observe the specifications provided by the profile manufacturer; contact the profile manufacturer if necessary.
 - ▶ Use the recommended screws.
 - ▶ Select the length of the screws according to the profiles used.
 - ▶ Ensure that the hardware components are adequately secured; contact the screw manufacturer if necessary.
-

ATTENTION

Using incorrect screw material may cause property damage.

Using the wrong screws may damage the components.

- ▶ Only use galvanised zinc-plated and passivated steel screws.
 - ▶ Use screws with additional sealing in more challenging climatic conditions.
 - ▶ Use stainless-steel screws on stainless-steel components only.
 - ▶ For aluminium components, use screws made of steel (coated with zinc-nickel or zinc flakes) or stainless steel.
-

ATTENTION

Improper screw fixings may cause property damage.

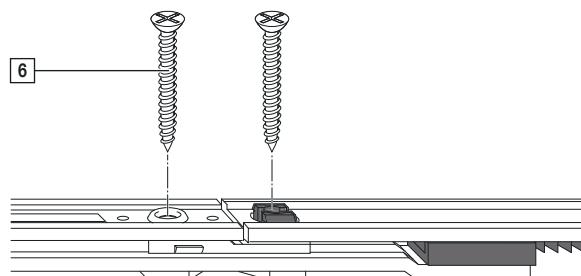

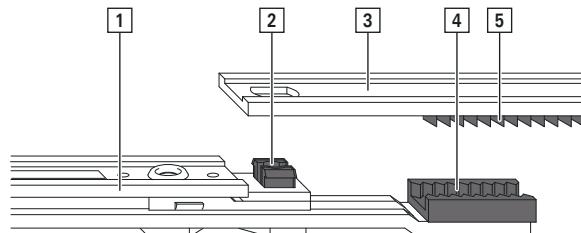

Improper screw fixings may damage the components and the element as a whole, and stop them from working properly.

- ▶ Unless stated otherwise, turn screws in straight.
 - ▶ Tighten screw heads until they are flush with the surface.
 - ▶ Do not over-tighten screws. Note the torque. Choose a torque that will not deform the hardware and profile. Define profile-specific torques on the basis of the demo assembly.
 - ▶ Use the recommended screws.
 - ▶ Select the length of the screws according to the profiles used.
-

8.4 Force-fit connection

Coupleable hardware components always require a force-fit connection.

Assignment	Description
[1]	Component A
[2]	Screw guide with clamp
[3]	Component B
[4]	Component A toothed segment
[5]	Component B toothed segment
[6]	Screw

Force-fit connections are formed by screwing down components A and B so that forces and movements are transferred without loss.

INFO

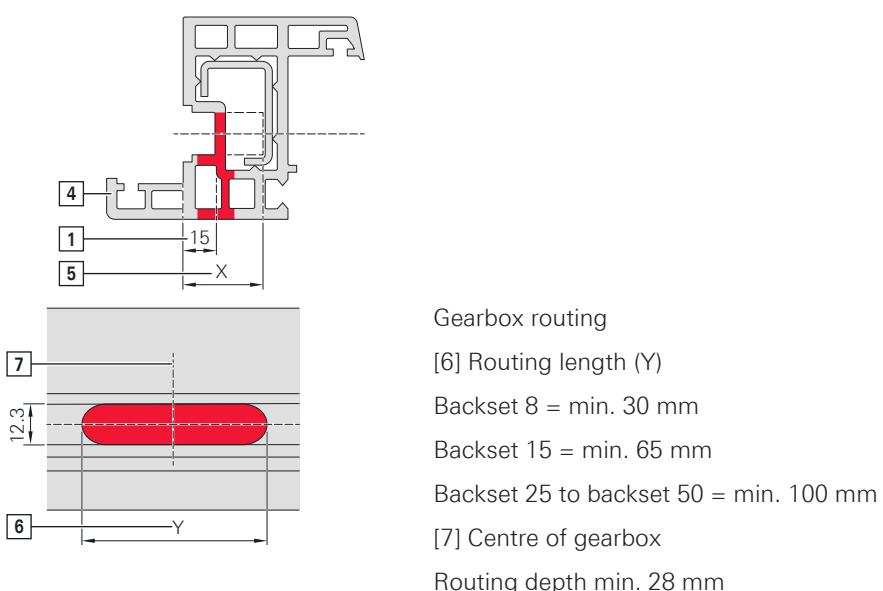

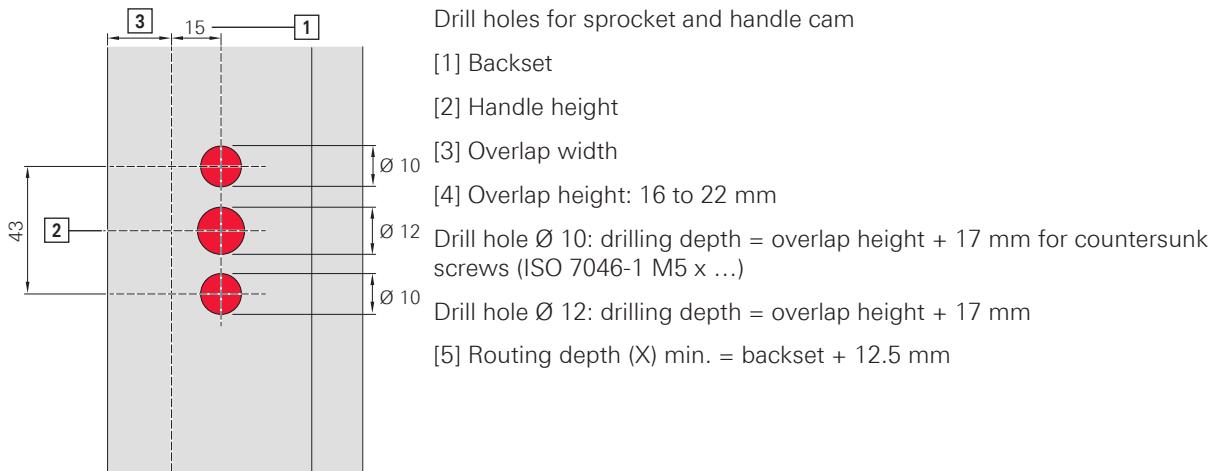

All coupleable components are delivered attached in the centre.

Installation

8.6 Sash

8.6.1 Installation sequence

Installation sequence (suggestion)

- [1] Corner drive
- [2] Corner drive
- [3] T&T espagnolette
- [4] Sash stay corner drive
- [5] Stay guide
- [6] Vertical and horizontal centre lock
- [7] Corner hinge

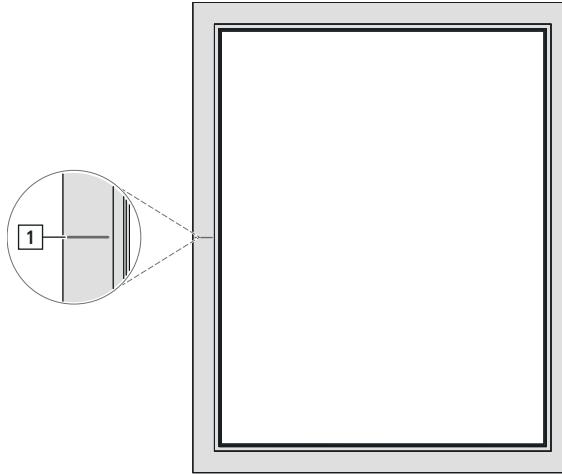

8.6.2 Preparing the sash for the T&T espagnolette

8.6.2.1 Handle drill holes

Drilling the holes for the handle

1. Mark the handle height on the inside of the sash [1].

2. Drill holes.

Note any different drilling dimensions. → 8.5
"Drilling and routing dimensions" from page 134

3. Deburr the drill holes.

8.6.2.2 Gearbox cutout

Routing the gearbox cutout

1. Route the espagnolette cutout.

Observe the routing dimensions. → 8.5 "Drilling and routing dimensions" from page 134

2. Deburr the espagnolette cutout.

Installation

Sash

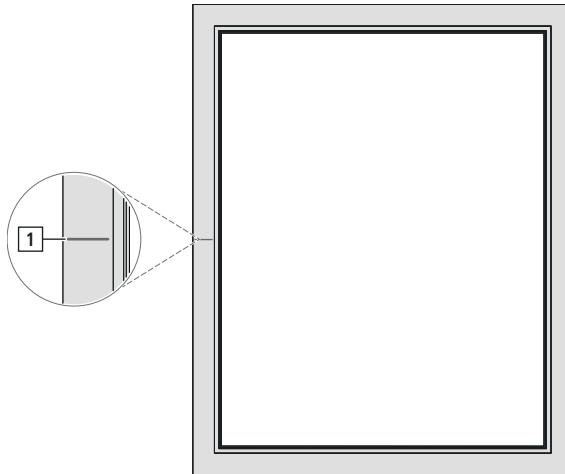

Preparing the sash for a lockable T&T espagnolette

8.6.3 Preparing the sash for a lockable T&T espagnolette

8.6.3.1 Handle drill holes

Drilling the holes for the handle

1. Mark the handle height on the inside of the sash [1].

2. Drill holes.

Note any different drilling dimensions. → 8.5
"Drilling and routing dimensions" from page 134

3. Deburr the drill holes.

8.6.3.2 Gearbox cutout with lock casing

Routing the gearbox cutout with lock casing

1. Route the espagnolette cutout.

Observe the routing dimensions. → 8.5 "Drilling and routing dimensions" from page 134

2. Deburr the espagnolette cutout.

8.6.4 Cropping the hardware components

ATTENTION

Incorrect cropping methods may result in property damage.

Do not insert the hardware components into the sash before they have been cropped. The screw guide engages and can be destroyed when it is removed.

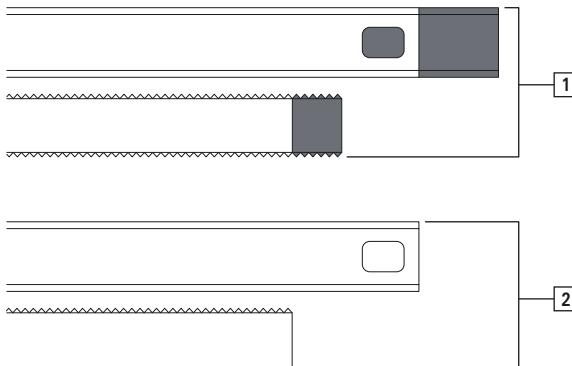

- ▶ Only lay out the hardware components and do not insert them into the sash before they have been cropped.

The following hardware components are cropped:

- Espagnolettes
- Stay guide

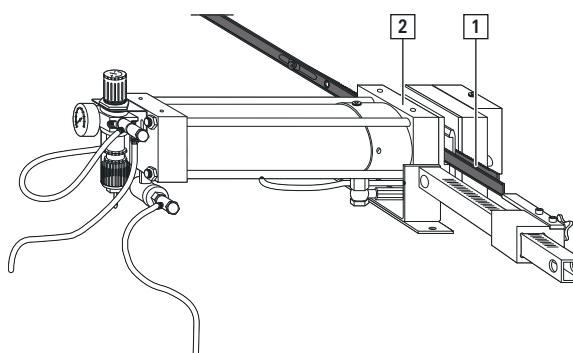

Cropping with a pneumatic punch (hole punching)

Hardware components are delivered 10 mm longer than the nominal dimension.

Assignment	Description
[1]	Hardware delivery state
[2]	Hardware, cropped

1. Place the hardware component in the required position.
2. Mark the length on the hardware component.
3. Insert the hardware component [1] into the pneumatic punch [2].

4. Align the hardware component.
5. Crop the hardware component.

Installation

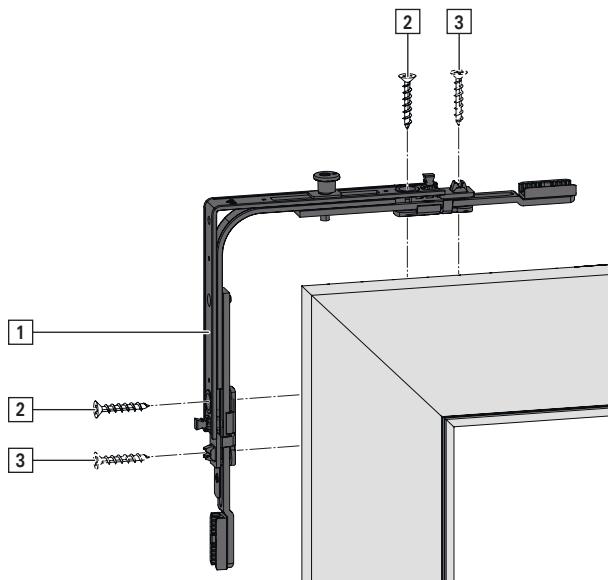

Sash

Corner drive

8.6.5 Corner drive

Installing the corner drive

1. Insert the corner drives [1] and screw them down with two screws [2].

2. After all of the connector components have been installed, screw down the corner drives with a further two screws [3]. → 8.4 "Force-fit connection" from page 133

8.6.6 T&T espagnolettes

8.6.6.1 Fixed handle height

Installing the T&T espagnolette

1. Place the espagnolette in the required position, mark the length on one side and crop it .
2. Insert the espagnolette with the cropped side facing upwards and create a force-fit connection. → 8.4 "Force-fit connection" from page 133

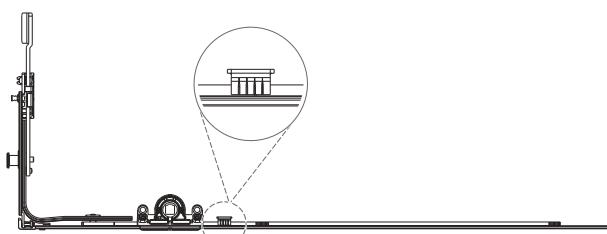

PRECONDITION

At an SRH of > 2400 mm, insert the multipart centre lock at the top on the locking side and create a force-fit connection.

INFO

At an SRH of 280 - 290 mm, the screw guide must be removed (e.g. using pliers).

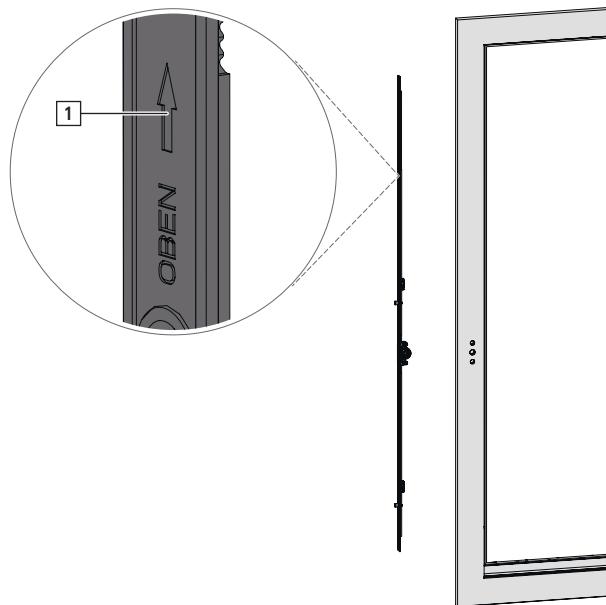

8.6.6.2 Centred / variable handle height

Installing the T&T espagnolette

1. Place the espagnolette in the required position, mark the length on both sides, remove it and crop it .
2. Insert the espagnolette. Ensure it is installed in the correct direction, with the arrow [1] pointing upwards.
Create a force-fit connection. → 8.4 "Force-fit connection" from page 133

PRECONDITION

At an SRH of > 2400 mm, insert two multipart centre locks at the top on the locking side and create a force-fit connection.

Installation

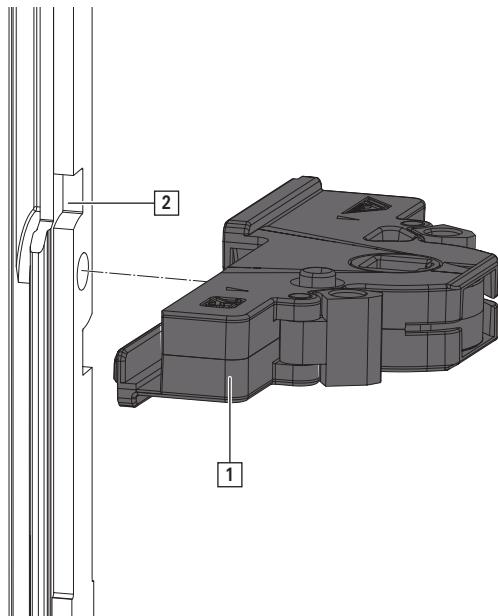

Sash

High backset espagnolette

8.6.7 High backset espagnolette

Gearbox

1. Insert the gearbox [1] into the espagnolette faceplate [2] rotated by 90°. While doing so, insert the cam into the hole provided.

2. Turn the gearbox clockwise until the gearbox clicks into place.

The gearbox is positioned flush with the espagnolette faceplate.

3. For dismantling, turn the gearbox anticlockwise until the gearbox comes out of the groove.
Remove from the espagnolette faceplate.

**Lock casing**

1. If the locking lug [3] is protruding, push it back into the lock casing [1].

Turn the lock casing slightly before inserting it into the espagnolette faceplate [2].

2. Insert the lock casing into the groove and turn clockwise until the lock casing clicks into place.

The lock casing is positioned flush with the espagnolette faceplate.

3. For dismantling, turn the lock casing anticlockwise until the lock casing comes out of the groove.

Remove from the espagnolette faceplate.

Installation

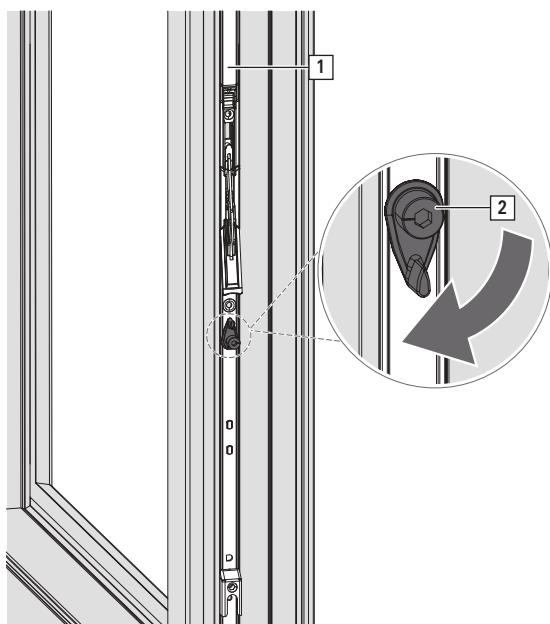

Sash

Floating-mullion espagnolette, Plus

8.6.8 Floating-mullion espagnolette, Plus

1. Insert the Plus floating-mullion sash espagnolette [1] into the sash groove.

For installation in the right-hand sash, turn the eccentric bolt [2] 180°.

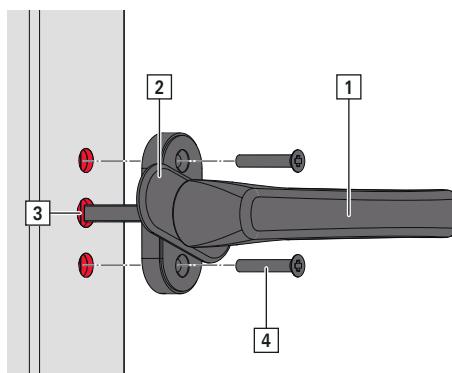

2. Mount the second opening sash with the floating-mullion espagnolette, Plus open (as delivered).

8.6.9 Handle

8.6.9.1 Handle – T&T espagnolette

1. Move the handle [1] to the turn position (horizontally aligned with the escutcheon).
2. Rotate the cover [2] on the handle 90°.

3. Insert the handle into the sash [3].
4. Screw down the handle using screws [4].
5. Rotate the cover on the handle back 90°.

8.6.9.2 Centre fixing

INFO

All coupleable components are delivered attached in the centre.

Undoing the centre fixing

Turning the handle undoes the centre fixing of the hardware components. Undo the centre fixing with the sash open.

1. Turn the handle [1] in one direction as far as it will go.
Audible cracking noise.

2. Turn the handle in the opposite direction as far as it will go.

Audible cracking noise.

3. Turn the handle in both directions again and check for ease of movement.

Installation

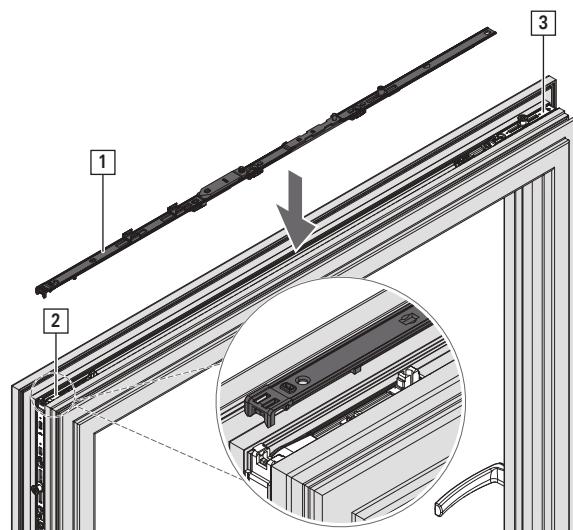

Sash

Stay guide

8.6.10 Stay guide

8.6.10.1 Installing the stay guide

1. Insert the stay guide [1] into the sash groove and clip it into the sash stay corner drive [2].

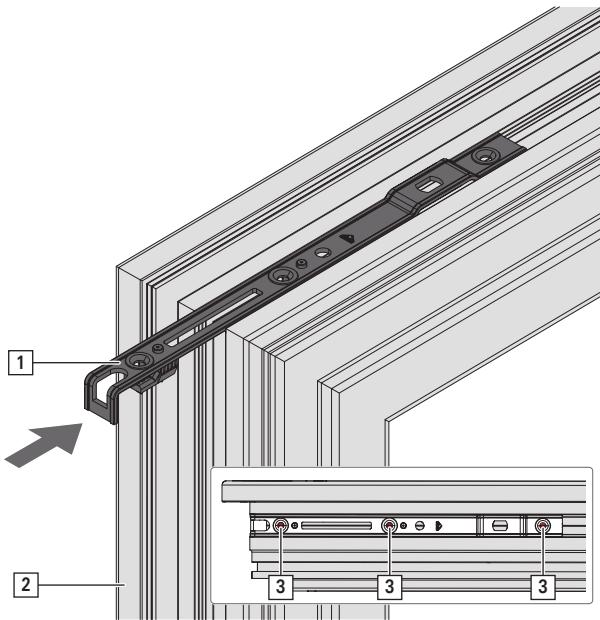

2. Connect the stay guide to the corner drive [3].
Creating a force-fit connection → *from page 133*

8.6.11 Rebate sash stay

Installing the rebate stay guide

1. Insert the rebate stay guide [1] into the sash groove [2].
Check that it is seated flush.

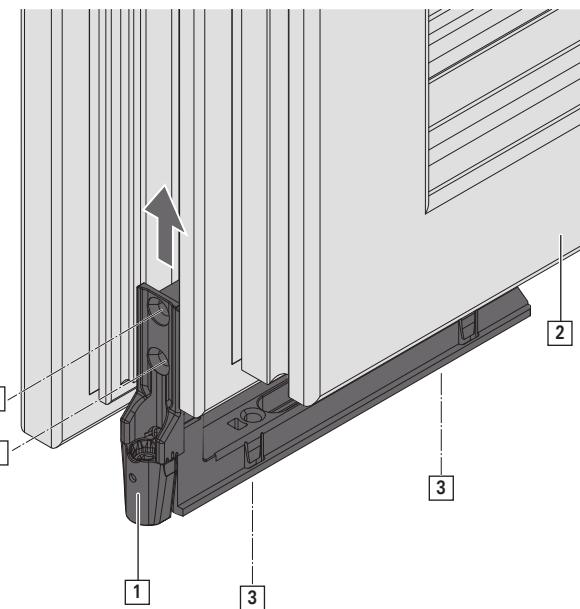

2. Fasten with three screws [3].

8.6.12 Corner hinge

1. Place the corner hinge [1] on the sash [2].

2. Fasten with four screws [3].

Installation

Sash

Lifting mishandling device / sash lifter

8.6.13 Lifting mishandling device / sash lifter

INFO

The sash lifter is installed in the same way as the lifting mishandling device. The installation of the lifting mishandling device is shown here.

1. Clip the lifting mishandling device [1] into the hole pattern provided in the espagnolette [2].

Position near the handle [3].

2. Fasten with a screw [4].

3. Activate the lifting mishandling device by pushing the arm in the required direction until the arm cam snaps past the spring. Do not push the arm cam beyond the housing. The lifting mishandling device's centre fixing is undone.

Restoring the neutral position

1. Use a suitable tool, for example a screwdriver, to push down on the spring [1] beneath the slot.

2. Keep the spring held down and turn the arm [2] back to 0°.

The lifting mishandling device returns to the neutral position and can be reactivated.

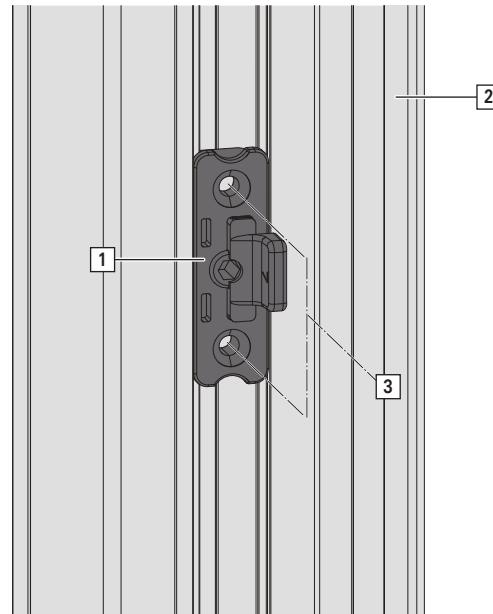

8.6.14 Bullet catch

1. Insert the bullet-catch sash component [1] into the espagnolette recess [2].
To do so, insert the nose of the bullet catch [3] into the flat side of the espagnolette recess and clip the bullet catch into place.

2. Secure with screw [4].

8.6.15 Concealed centre closer

1. Place the centre closer [1] in the sash groove [2].
For positioning, see → from page 152

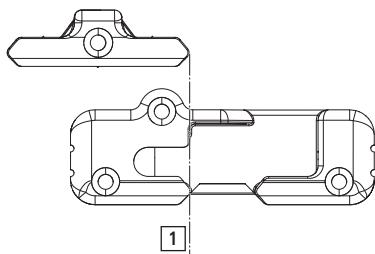

2. Fasten with two screws [3].

8.7.3 Security striker for tilt ventilation (TiltSafe)

1. Position the security striker for tilt ventilation [1] on the frame [2].

In the turn position, the entering cam must be positioned in the same way as a standard striker.

Striker point of entry [4]

2. Secure with three single-use screws [3].

INFO

Single-use screws can be tightened but not undone.

INFO

RC 2 protection cannot be achieved in the 135° handle position (night ventilation). To achieve RC 2 protection:

1. Tilt the window
2. Lock the handle
3. Remove the key.

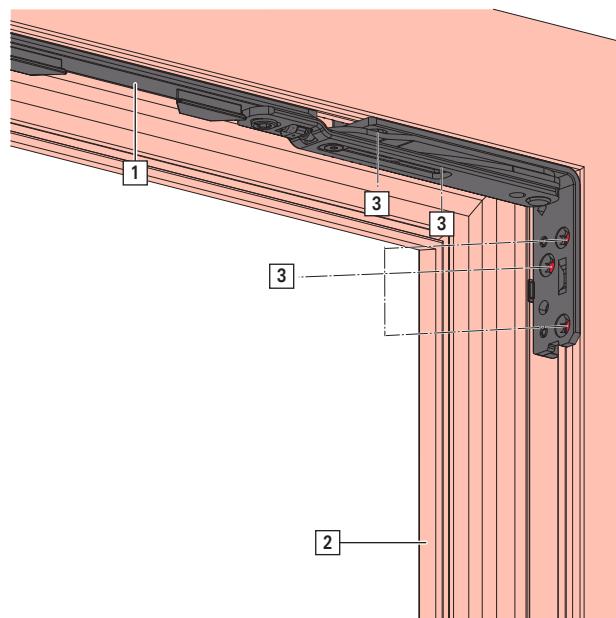

Installation

Frame

Sash stay / rebate sash stay

8.7.4 Sash stay / rebate sash stay

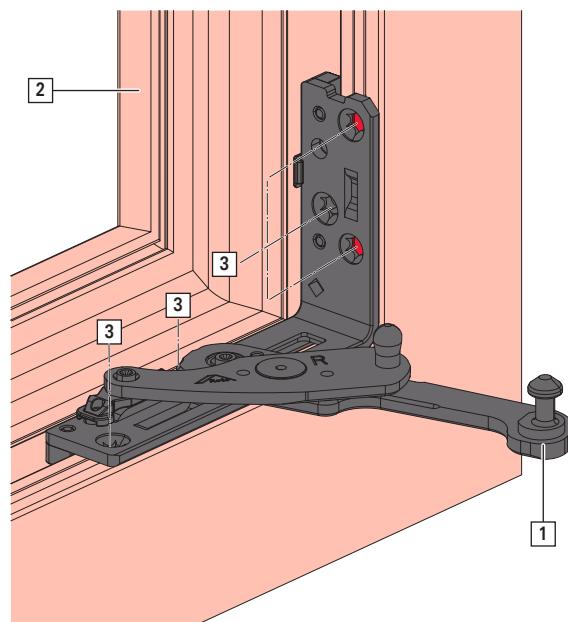

1. Place the sash stay [1] in the frame [2].

2. Fasten with five screws [3].

8.7.5 Pivot rest

1. Place the pivot rest [1] on the frame [2].

2. Fasten with five screws [3].

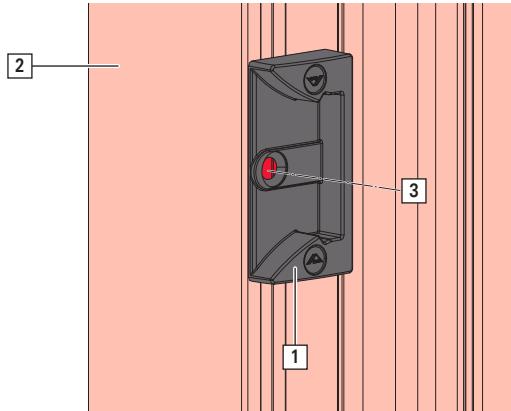

8.7.6 Lifting mishandling device

1. Position the lifting mishandling device frame component [1] in the frame [2].

2. Secure with two screws [3].

8.7.7 Bullet catch

1. Position the bullet-catch frame component [1] in the frame [2].

2. Fasten with a screw [3].

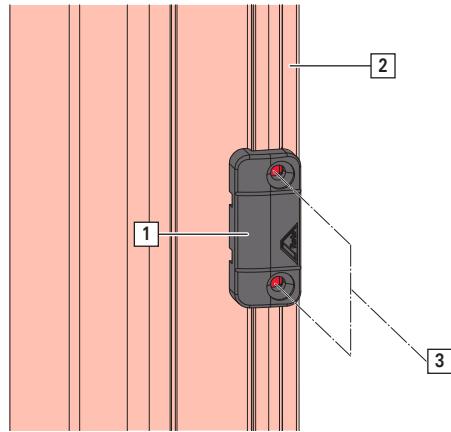

Installation

Frame

Concealed centre closer

8.7.8 Concealed centre closer

1. Position the centre closer [1] in the frame [2].

2. Fasten with two screws [3].

INFO

Put pressure-proof packers between glass and frame in the area of the centre closers.

8.8 Accessories

[A] Installation of tilt stay at the side

[B] Installation of tilt stay at the top

8.8.1.2 Sash component

Position at the side

1. Place the sash component [1] on the corner drive [2] (position [A] or [B]).

2. Secure with screw [3].

Position at the top

1. Place the sash component [1] on the espagnolette [2].

2. Secure with screw [3].

8.8.1.3 Frame component

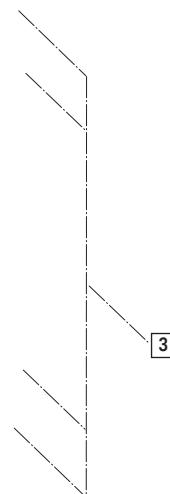

1. Break the packer [1] apart in the centre.
2. Push the tilt stay [2] onto the packer.

INFO

With a smooth rebate, no packers are required.

3. Position the tilt stay in the rebate.
4. Secure with four screws [3].

Installation

Accessories

Additional stay arm

8.8.2 Additional stay arm

8.8.2.1 Sash component

1. Connect the additional stay arm sash component [1] to the corner drive [3]. Creating a force-fit connection → *from page 133*

2. Fit the stay guide [2].

3. Secure with two screws [4].

8.8.2.2 Frame component

1. Push the packer [1] into the frame component [2].
Ensure that it is firmly seated.

**INFO**

With a smooth rebate, no packers are required.

2. Insert the frame component with packer [1] into the frame profile.

The distance between the frame rebate and frame component is 417 mm.

3. Secure with three screws.

Additional stay arm for arched windows

1. Break the frame component at the notch.
2. Insert the frame component into the frame profile.
3. Secure with three screws.

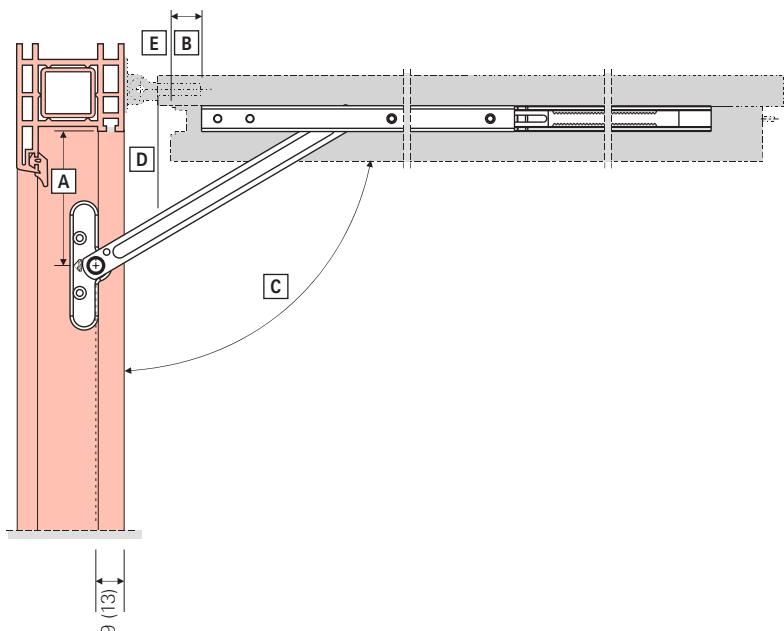

Installation

Accessories

Arrestable brake stay

8.8.3 Arrestable brake stay

8.8.3.1 Installation dimensions

Assignment	Meaning
[A]	Frame dimensions
[B]	Sash dimensions
[C]	Opening angle 90°
[D]	Overlap edge
[E]	Sash rebate edge

INFO

Only the sash lifter and not the lifting mishandling device can be used in conjunction with the arrestable brake stay.

8.8.3.2 Arrestable brake stay

Installation dimensions 571 - 1570 mm

Application range	Corner drive	Centre lock	Arrestable brake stay	Arm	Frame dimension	Sash dimension
490 - 570 [2]	Special corner drive	—	486820	492757	135	130

		CL 600 KU				

[2] Turn-Only sash only

8.8.3.3 Sash component

**INFO**

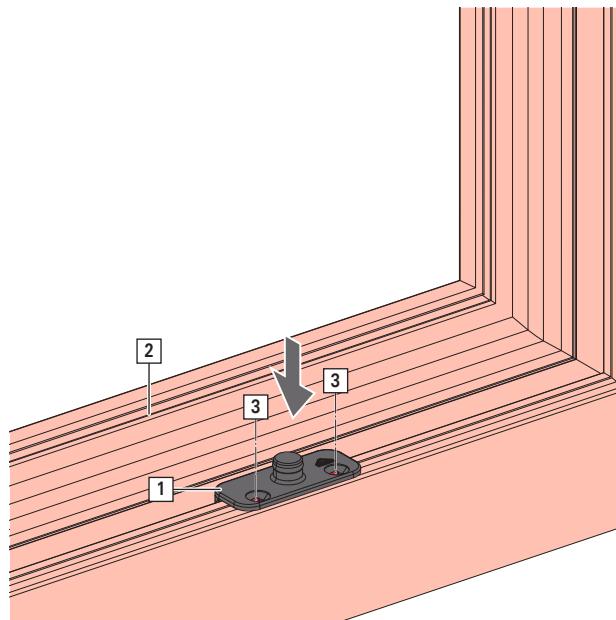

Only the sash lifter and not the lifting mishandling device can be used in conjunction with the arrestable brake stay.

1. Place the scissor stay arm [1] on the arrestable brake stay [2].
Turn the arm 180°. The arm is fixed in position.
2. Position the arrestable brake stay on the sash and connect it to the centre lock or corner drive. For dimensions, see → *from page 182*.
3. Move the slider [1] in jerks to move the assembly fixture out of the final position. While doing so, strike the cam [2].
4. Once the centre fixing is undone, the centre position of the push rod can be adjusted by moving the bend of the push rod to the position of the punching on the floating mullion.
[A] Punching on the floating mullion
[B] Bend of the push rod

8.8.3.4 Frame component

1. Position the frame component [1] in the frame groove [2].

2. Fasten with two screws [3].

8.8.4 Load transfer

8.8.4.1 Sash component

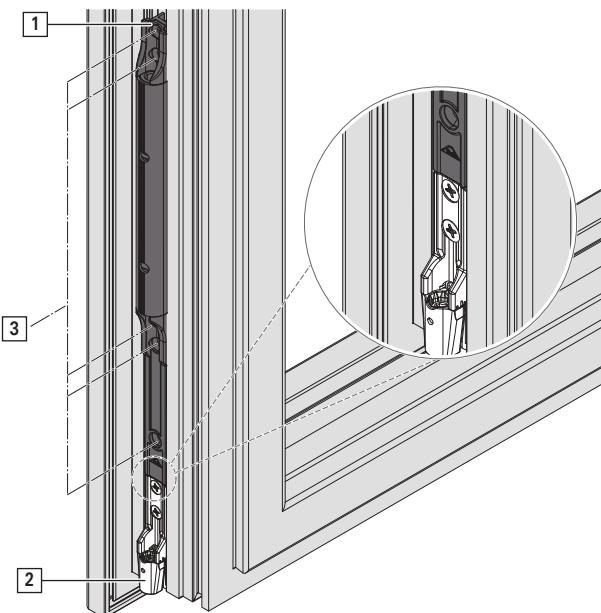

INFO

No load transfer for sash weights < 80 kg, as this may lead to malfunctions.

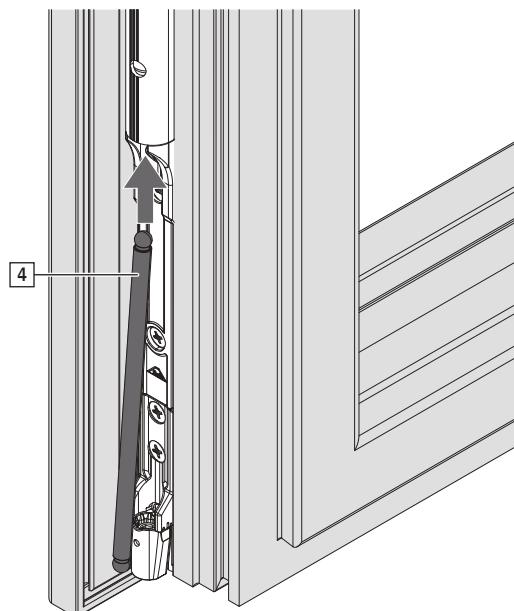

The use of a turn restrictor is mandatory.

If the sash is transported mounted in the frame, the load transfer spring can be pre-tensioned even in the workshop. This is only useful, however, if the sash is fitted with the full glass weight.

1. Insert the load transfer sash component [1] up to the stop to the corner hinge [2].

2. Fasten with five screws [3].
3. Push the support rod [4] into the load transfer.

8.8.4.2 Frame component

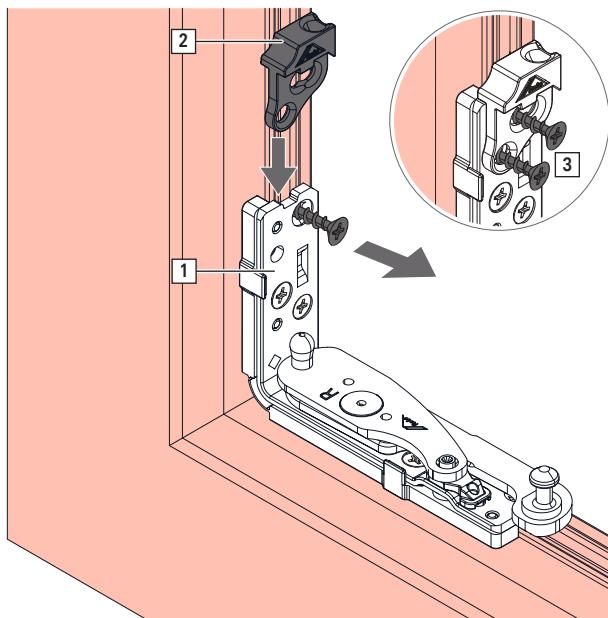

INFO

No load transfer for sash weights < 80 kg, as this may lead to malfunctions.

The use of a turn restrictor is mandatory.

If the sash is transported mounted in the frame, the load transfer spring can be pre-tensioned even in the workshop. This is only useful, however, if the sash is fitted with the full glass weight.

1. Undo the top screw fixing from the pivot rest [1].

2. Place the load transfer frame component [2] on the pivot rest and fasten with two screws [3].

8.8.5 Turn restrictors

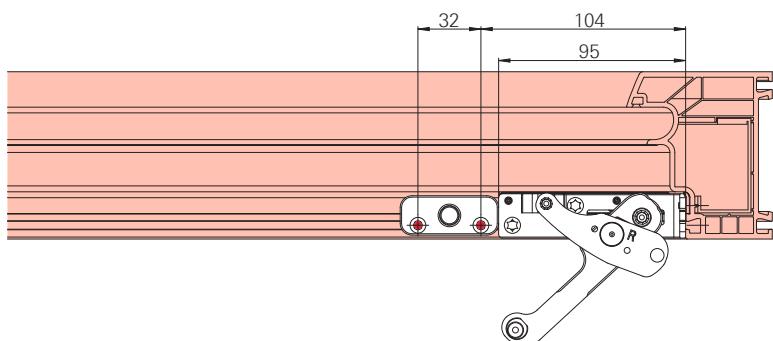

8.8.5.1 Drilling and routing dimensions

**INFO**

The turn restrictor is an additional component designed to provide extra convenience; it is not a security component.

Frame component

Positioning the 90° turn restrictor

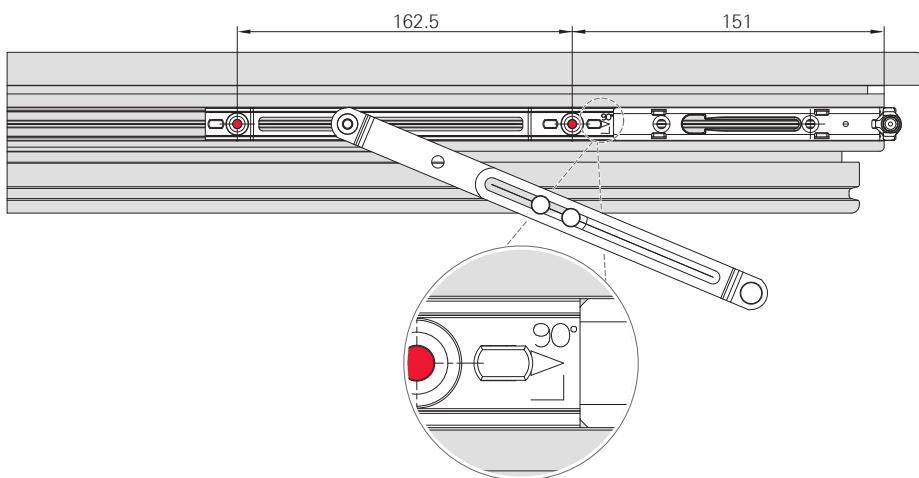

Sash component

**ATTENTION****Improper installation may cause property damage.**

Incorrect installation of the sash component destroys the pivot rest.

- ▶ The 90° imprint must point towards the corner hinge.

8.8.5.2 Sash component

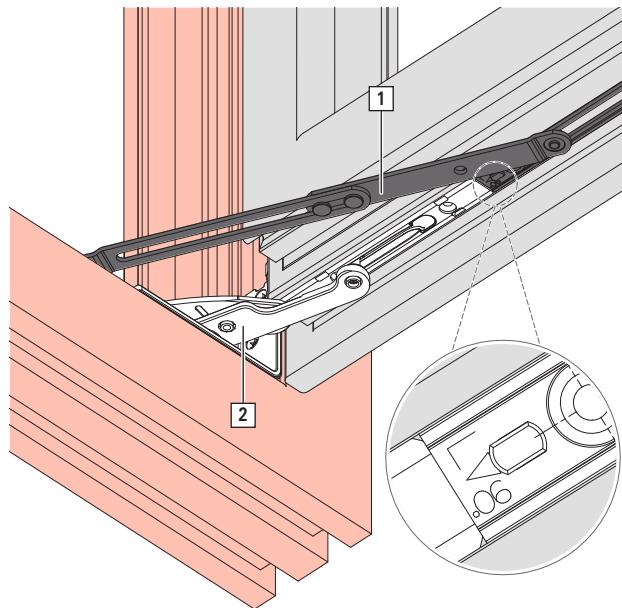

- Let the sash component [1] come into contact with the corner hinge [2].

ATTENTION
Improper installation may cause property damage.

Incorrect installation of the sash component destroys the pivot rest.

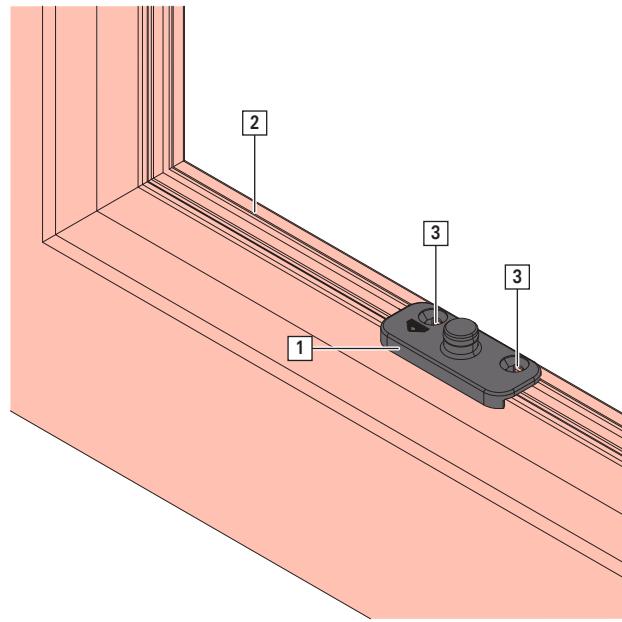

- The 90° imprint must point towards the corner hinge.

- Fasten with two screws.

8.8.5.3 Frame component

- Let the frame component [1] come into contact with the pivot rest [2].

- Fasten with two screws [3].

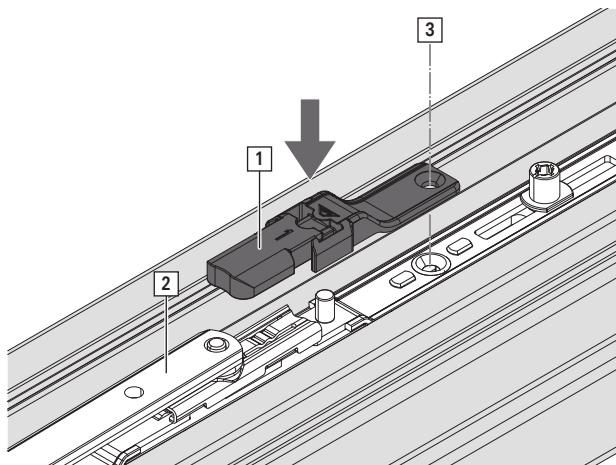

Installation

Joining the sash and frame

Anti-slam device

8.8.6 Anti-slam device

1. Fit the anti-slam device [1] to the stay guide [2] in the mounted sash.

2. Fasten with a screw [3].

8.9 Joining the sash and frame

WARNING

Heavy loads pose the risk of injury and property damage.

Lifting and carrying heavy loads in an uncontrolled manner may lead to physical injury and property damage.

- Transport and installation must be carried out by at least two people.
- Use transportation means. → 13 "Transport" from page 214

8.9.1 Connecting the corner hinge to the pivot rest

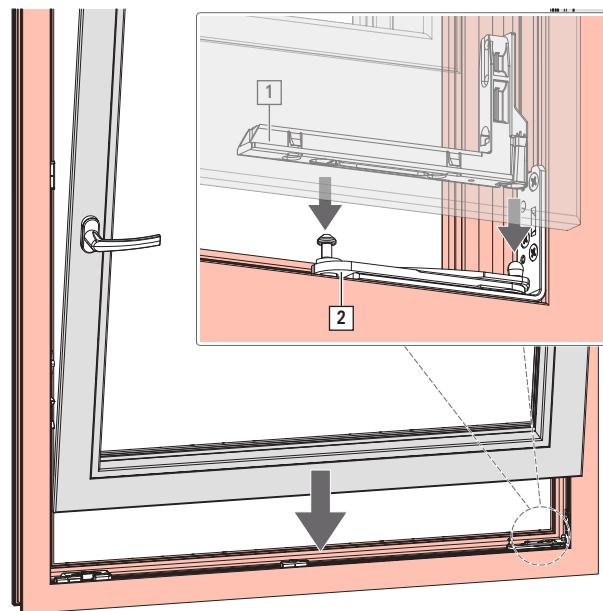

⇒ Pivot rest in initial position

1. Push down on the lifting mishandling device (if fitted).
2. Handle in turn position.

Tilt&Turn hardware

TiltFirst hardware

3. With the sash slightly tilted, guide it along the frame in a downwards direction until you feel the pivot rest [1] touch the corner hinge [2].

4. Secure the sash to prevent it from falling.

WARNING

An unsecured sash may pose a risk of death!

The sash may fall during installation if it is not securely connected to the frame.

- ▶ Secure the sash to prevent it from falling, e.g. by using two people.

5. Push down on the lifting mishandling device (if fitted).

Installation

Joining the sash and frame

Connecting the corner hinge to the pivot rest

- Move the handle to the tilt position.

Tilt&Turn hardware

TiltFirst hardware

INFO

Under normal circumstances, this constitutes incorrect operation of the hardware, but it is a necessary step in this case.

- Connect the sash stay → *from page 193*.

8.9.2 Mounting the stay arm

Sash stay 350 / 500

⇒ Corner hinge connected to the pivot rest.

1. Open the sash.
2. Position the slider [1] of the stay arm on the stay guide.

INFO

With SRH < 600 mm, the tilt distance must be limited to 80 mm. Turn the slider 180° to limit the tilt distance to 80 mm [A].

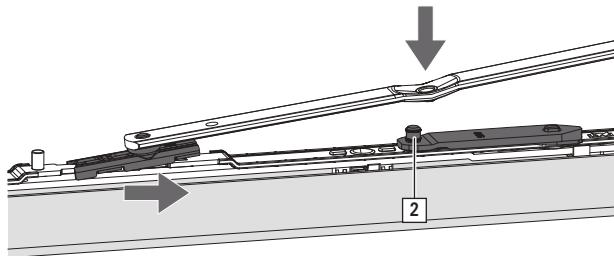

INFO

Fit an anti-slam device to prevent the sash from shutting by itself → *from page 190*.

Sash stay 350: mat. no. 794827

Sash stay 500: mat. no. 794828

3. Move the stay arm and clip it onto the supporting arm bolt [2].

4. Push down on the lifting mishandling device (if fitted).
Turn the handle to the turn position.
Turn the handle to the locked position.
Turn the handle to the turn position.

INFO

Sash stay 350: if the sash is difficult to close from the tilt position, reduce the tilt distance to 80 mm.

Sash stay 250

⇒ Corner hinge connected to the pivot rest.

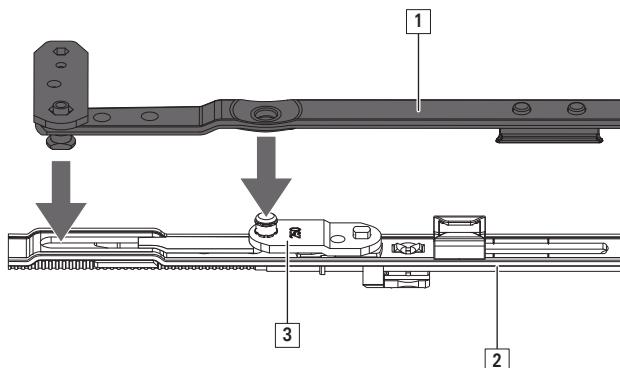

1. Open the sash.

Installation

Joining the sash and frame

Mounting the stay arm

- Push the stay arm [1] onto the stay guide [2] and supporting arm [3].

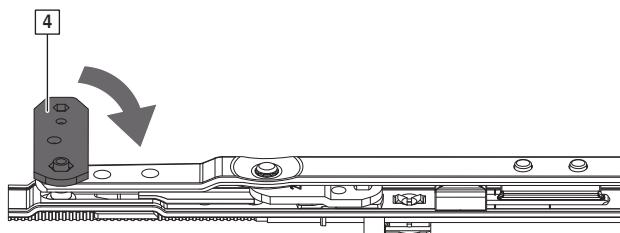

- Close the retainer clasp [4].

INFO

For a tilt distance set to 80 mm, use an anti-slam device (mat. no. 487206).

- Push down on the lifting mishandling device (if fitted).

Turn the handle to the turn position.

Turn the handle to the locked position.

Turn the handle to the turn position.

INFO

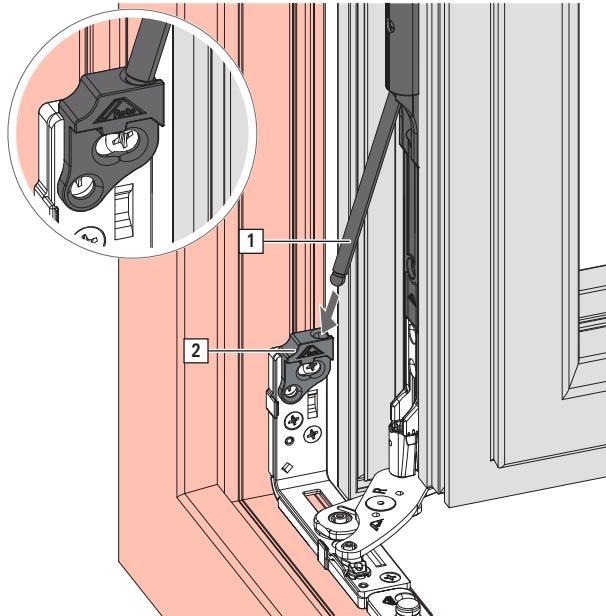

Sash stay 250: if the sash is difficult to close from the tilt position, reduce the tilt distance to 80 mm.

8.9.3 Load transfer

⇒ Sash mounted.

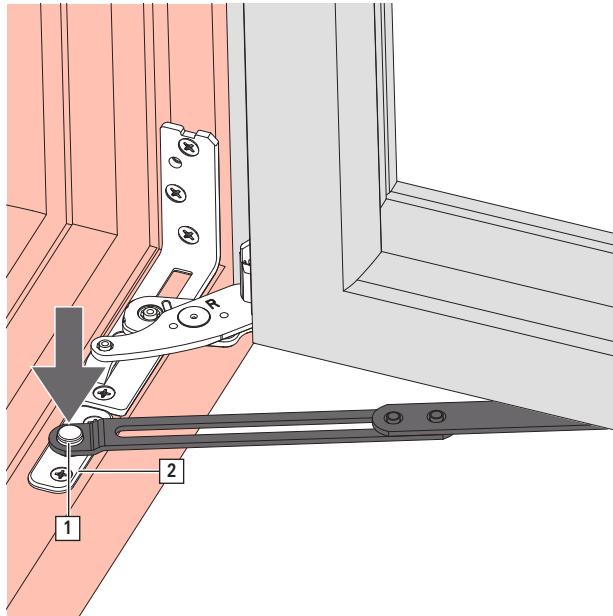

1. Open the sash 90°.
2. Connect the support rod [1] to the sash component and insert into the recess in the frame component [2].

8.9.4 Turn restrictor

⇒ Sash mounted.

1. Open the sash.
2. Push the hole in the end of the sash component over the rubber ring [1] of the bolt on the frame component [2].

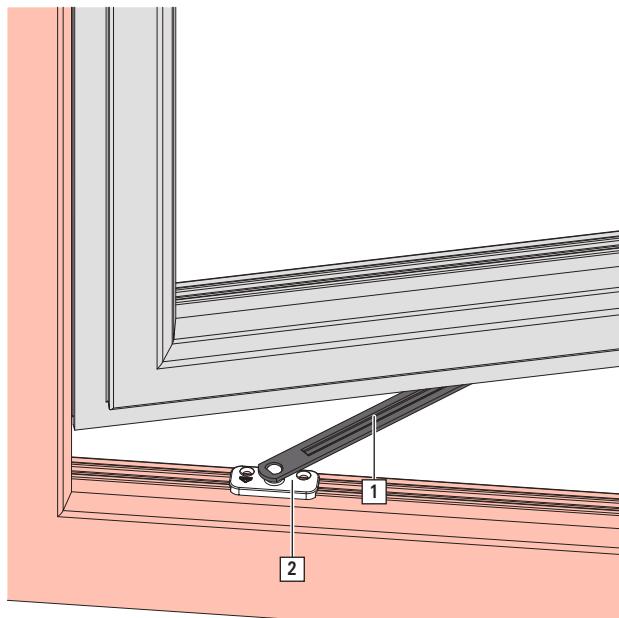

Installation

Joining the sash and frame

Arrestable brake stay

8.9.5 Arrestable brake stay

1. Mount the scissor stay arm [1] in the frame component [2].

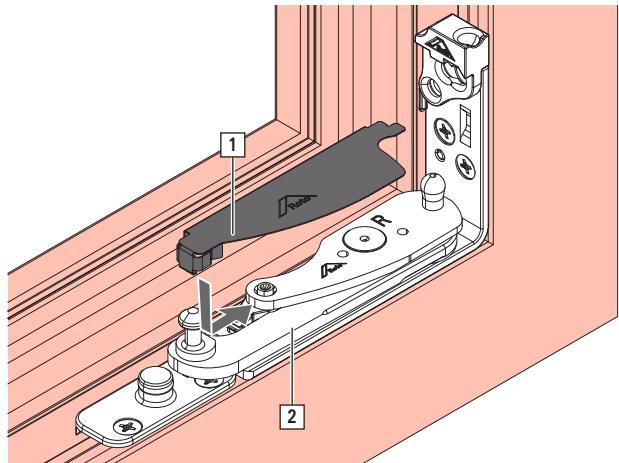

8.9.6 Pivot rest cover

INFO

Horizontal rebate clearance at the bottom 11.5 - 14 mm.

1. Slide the cover [1] onto the pivot rest [2] as far as it will go.

2. Clip in the cover.

9 Adjustment

INFO

Roto hardware components may only be adjusted by authorised professionals when the element is installed.

9.1 Locking cam

E cam

E cam	Adjustment distance	Gasket compression adjustment / mm	Height	Side view
		±0.8 mm		

P cam

P cam	Adjustment distance	Gasket compression adjustment / mm	Height	Side view
		±0.8 mm		

Adjustment
Locking cam

V cam

V cam	Adjustment distance	Gasket compression adjustment / mm	Height adjustment / mm	Side view
			$\pm 0.8 \text{ mm}$	
		$\pm 0.8 \text{ mm}$	$\pm 0.2 \text{ mm}$	
			$\pm 0.4 \text{ mm}$	
		$\pm 0.8 \text{ mm}$	$\pm 0.6 \text{ mm}$	
			$\pm 0.8 \text{ mm}$	

[1] 0 = initial position
[2] -0.8 mm max. adjustment
[3] +0.8 mm max. adjustment

V cam (from 2020)

V cam	Adjustment distance	Gasket compression adjustment / mm	Height adjustment / mm	Side view
			$+1.5 \text{ mm}$ -0.8 mm	
		$\pm 0.8 \text{ mm}$	$\pm 0.125 \text{ mm}$	
			$\pm 0.25 \text{ mm}$	
		$\pm 0.8 \text{ mm}$	$\pm 0.375 \text{ mm}$	
			$\pm 0.5 \text{ mm}$	

[1] 0 = initial position
[2] -0.8 mm max. adjustment
[3] +1.5 mm max. adjustment

9.2 Pivot rest and corner hinge

Height adjustment

1. Open the sash.
2. Height adjustment +2.0 / -1.0 mm via screw in the corner hinge [A].
Adjustment with size 4 hex key.

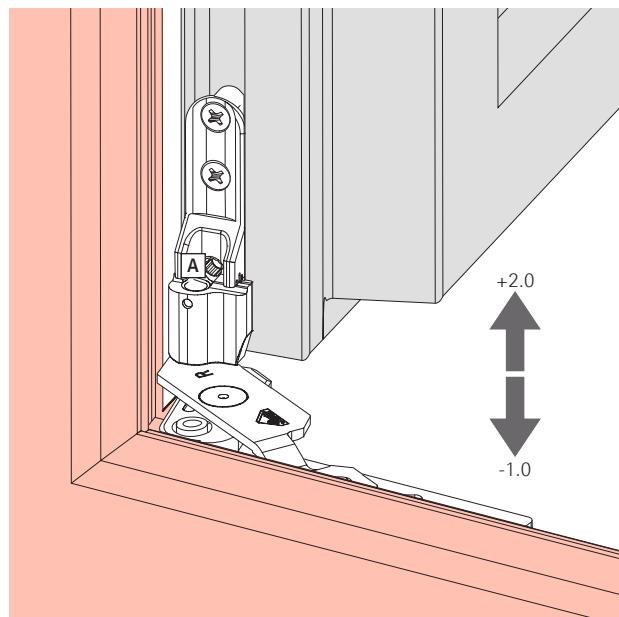

INFO

Readjust the load transfer after adjusting the height.

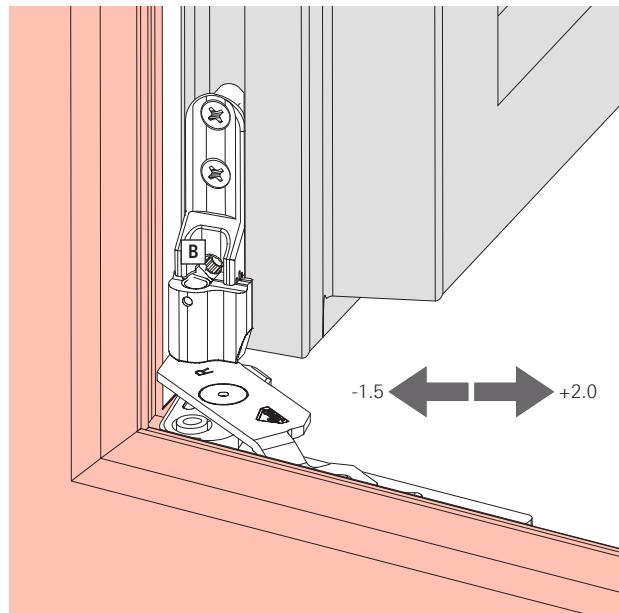

INFO

When using the cover, the horizontal rebate clearance at the bottom must be 12 - 14 mm, otherwise damage is possible.

Lateral adjustment

1. Open the sash.
2. Lateral adjustment +2.0 / -1.5 mm via screw in the corner hinge [B].
Adjustment with size 4 hex key.

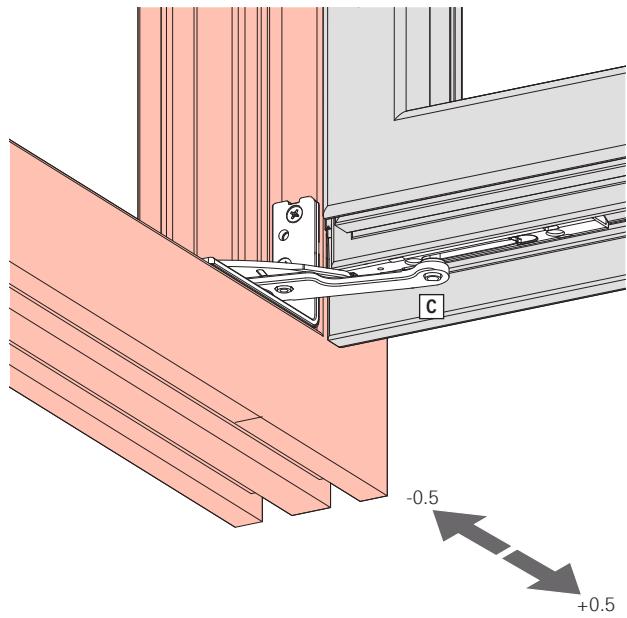

Gasket compression adjustment

1. Open the sash.

Adjustment

Sash stay

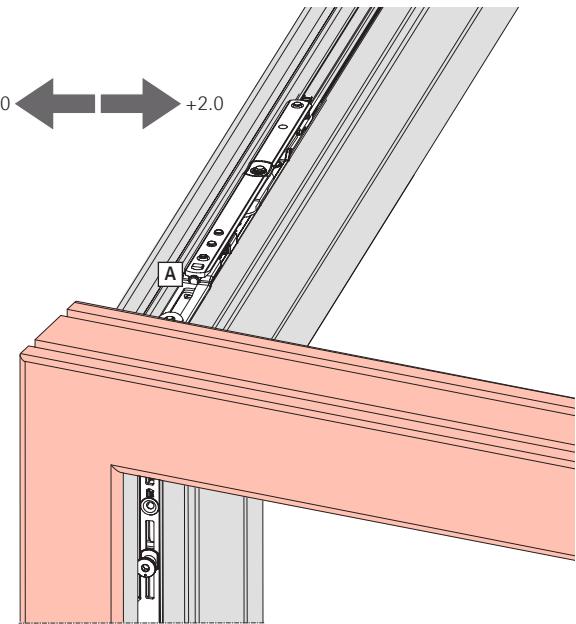

2. Gasket compression adjustment ± 0.5 mm via screw in the pivot rest [C].
Adjustment with size 4 hex key.

9.3 Sash stay

Lateral adjustment

1. Open the sash.

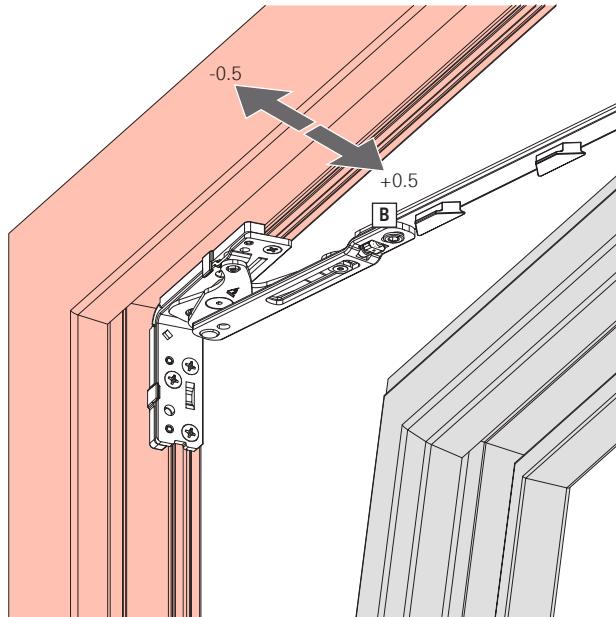

2. Lateral adjustment -2.0 / +2.0 mm via screw in the sash stay [A].
Lateral adjustment with size 4 hex key.

Gasket compression adjustment

1. Move the sash to the tilt position.

2. Gasket compression adjustment ± 0.5 mm via screw in the sash stay [B].

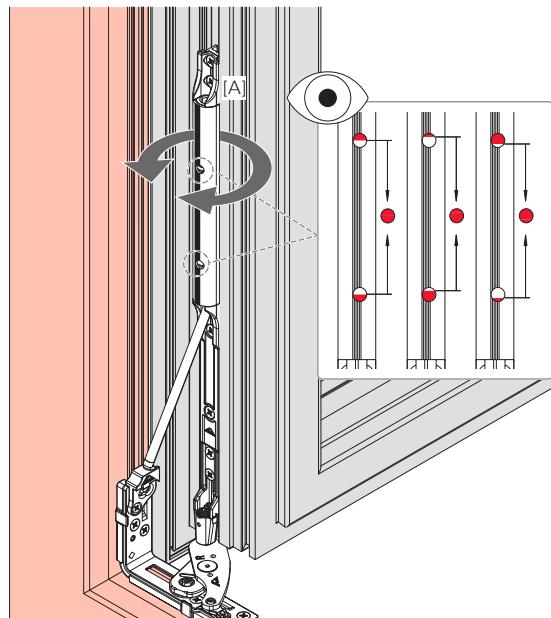

Gasket compression adjustment with size 4 hex key.

9.4 Load transfer

1. Open the sash.

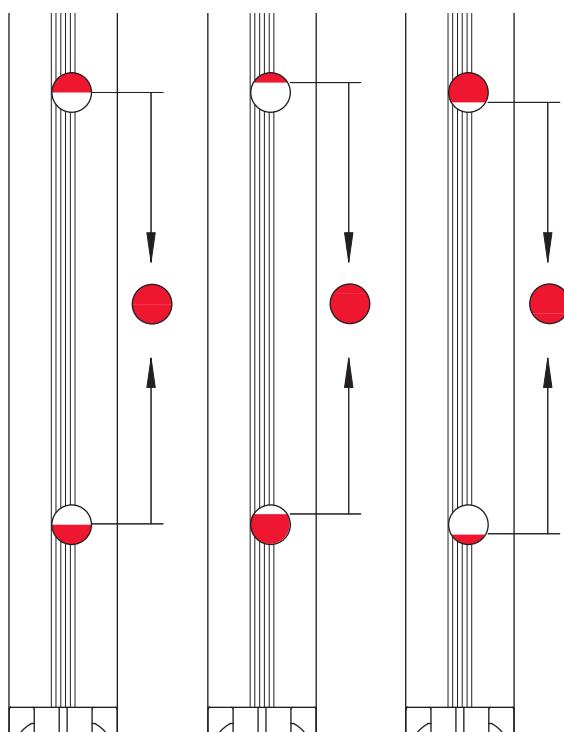

2. Tool: size 4 hex key

Using the adjusting screw [A], adjust the red partial circle so that a whole circle is produced by adding together the red partial circles.

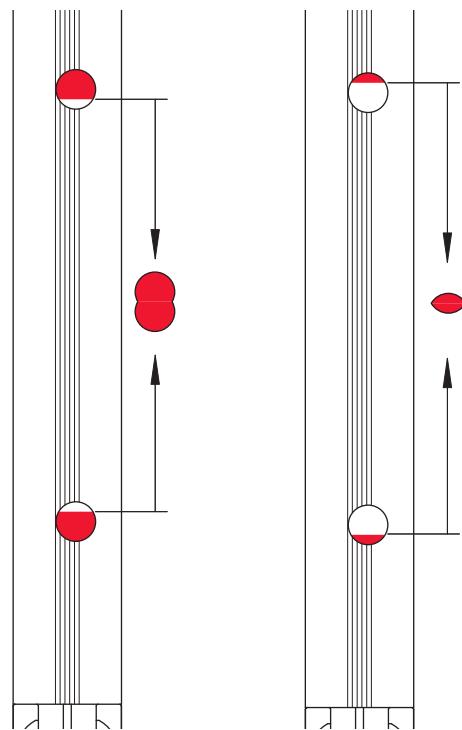

Check at the view windows.

Full circle = right

No circle = wrong

10 Operation

10.1 Handle position with Tilt&Turn hardware

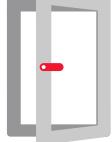

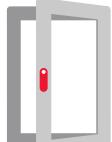

Handle position	Sash position	Meaning
		Sash in closed position.
		Sash in turned, open position.
		Sash in night ventilation position.
		Sash in tilted, open position.

10.2 Handle position with TiltFirst hardware

Handle position	Sash position	Meaning
		Sash in closed position.
		Sash in tilted, open position.
		Sash in turned, open position.

10.3 Handle position for arrestable brake stay

Handle position	Sash position	Meaning
		Sash in closed position.

Handle position	Sash position	Meaning
		Sash in turned, open position.
		Sash in fixed position.
		Release the fixed position.
		Sash in turned, open position.

10.4 Fault assistance

Fault	Cause	Corrective action	To be carried out by
Handle is difficult to turn.	Frame components have not been greased.	Grease the frame components.	<input type="checkbox"/>
	Handle is damaged.	Replace the handle.	<input checked="" type="checkbox"/>
	Handle screwed into place too tightly.	Undo the screw fixing slightly.	<input checked="" type="checkbox"/>
	Sash components with slanting screws.	Screw the sash components in straight.	<input checked="" type="checkbox"/>
	Sash components are damaged.	Replace the sash components.	<input checked="" type="checkbox"/>
	Incorrect striker positions.	Adapt the striker positions.	<input checked="" type="checkbox"/>
	Sash stay gasket compression is too strong (accumulation of gaskets).	Adjust the sash stay gasket compression or clean the gasket.	<input checked="" type="checkbox"/>
Handle cannot be turned 180°.	Sash components hinged or installed incorrectly.	Check the setting in the turn position (potentially rehang – start from the T&T espagnolette).	<input checked="" type="checkbox"/>
Sash falls into the tilt position when in the turn position.	Excessive clearance at the top.	Check the fit of the corner hinge.	<input checked="" type="checkbox"/>
		Check the fit of the pivot rest.	<input checked="" type="checkbox"/>
		Adjust the corner hinge so that it is positioned higher (pay attention to the tilt striker).	<input checked="" type="checkbox"/>
Sash falls into the turn position when in the tilt position.	Tilt striker damaged.	Replace the tilt striker.	<input checked="" type="checkbox"/>
Sash scrapes in the tilt position.	Insufficient clearance at the top.	Lower the corner hinge (pay attention to the tilt striker).	<input checked="" type="checkbox"/>
Locking cam is rubbing against the striker.	Sash mounted incorrectly.	Rehang the sash.	<input checked="" type="checkbox"/>
	Incorrect striker position.	Adapt the striker position.	<input checked="" type="checkbox"/>

= May be carried out by a specialist company or the end user

= Must be carried out by a specialist company

11 Maintenance

11.1 Maintenance intervals

ATTENTION

Failure to adhere to maintenance intervals may cause property damage.

The maintenance interval for all tasks relating to the hardware components is **annually** at the least. In hospitals, schools and hotels, the maintenance interval is **six-monthly**.

Regular maintenance is necessary in order to maintain the proper and smooth-running operation of the hardware and to prevent premature wear or even defects.

- ▶ Determine and adhere to the appropriate maintenance interval in accordance with the ambient conditions.

11.2 Cleaning

ATTENTION

Using incorrect cleaning agents and sealing compounds may cause property damage.

Cleaning agents and sealing compounds may damage the surfaces of components and gaskets.

- ▶ Do not use aggressive or flammable liquids, acidic cleaners or abrasive cleaners.
- ▶ Only use mild, pH-neutral cleaning agents that have been diluted.
- ▶ Apply a thin protective film to the components, for example using a cloth soaked in oil.
- ▶ Avoid aggressive vapours (e.g. produced by formic acid, acetic acid, ammonia, amine compounds, ammonia compounds, aldehyde, carbolic acid, chlorine, tannic acid) around the element.
- ▶ Do not use any acetic acid-crosslinking or acid-crosslinking sealing compounds or those with the aforementioned constituents as both direct contact with the sealing compound and its fumes can corrode the surface of the components.

Cleaning the hardware

- ▶ Clean deposits and contaminants off the hardware using a soft cloth.
- ▶ Lubricate movable parts and locking points after cleaning. → *11.3 "Care" from page 205*
- ▶ Apply a thin protective film to the hardware, for example using a cloth soaked in oil.

11.3 Care

ATTENTION

Using incorrect lubricants may cause property damage.

Substandard lubricants can prevent the hardware from working properly.

- ▶ Use high-quality lubricants.
- ▶ Only use resin-free and acid-free lubricants.

ATTENTION

Cleaning agents and lubricants may pollute the environment.

Leaking or excess cleaning agents and lubricants may pollute the environment.

- ▶ Remove any leaking or excess cleaning agents and lubricants.
- ▶ Dispose of cleaning agents and lubricants separately and properly.
- ▶ Observe the applicable directives and national laws.

Ease of movement can be improved by lubricating or adjusting the hardware. All functional hardware components must be lubricated on a regular basis.

Recommended lubricants

- Roto NX / NT grease

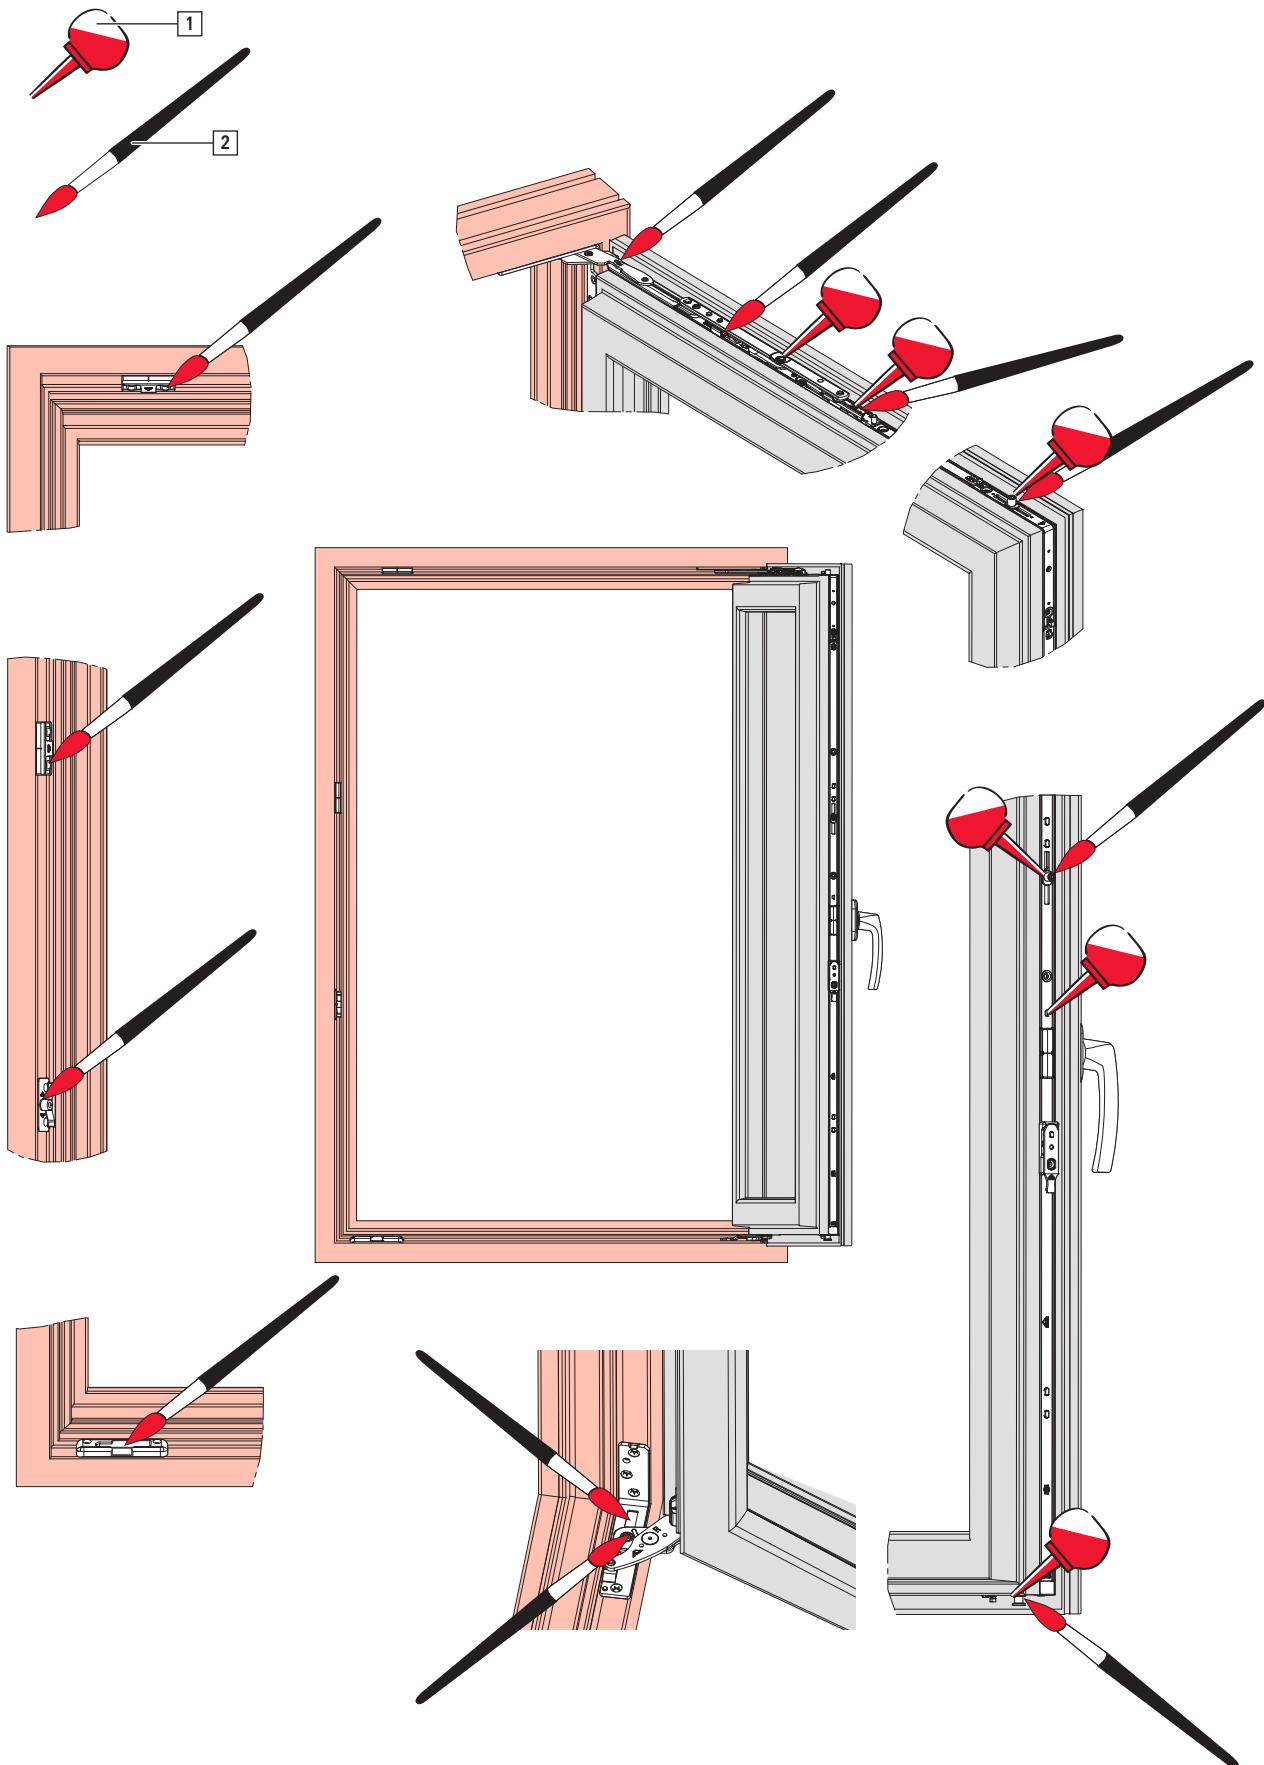

INFO

The figure displays the positioning of potential lubrication points. The figure does not necessarily match the installed hardware. The quantity of lubrication points varies depending on the size and design of the element.

11.3.1 Lubrication points

[1] Oil

[2] Grease

11.4 Performance test

WARNING

Improper repair work may pose a risk of death!

Improper maintenance may prevent the element from working properly and make it less safe to use.
► Always have repairs performed by a specialist company.

Check for proper operation:

- Inspect hardware components for damage, deformation and a firm fit.
- Check that windows or balcony doors run smoothly by opening and closing them.
- Check the window or balcony door gaskets for elasticity and fit.
- Check closed windows or balcony doors to ensure that they are leakproof.
- Locking and unlocking torque max. 10 Nm. The test can be performed using a torque wrench.

Have malfunctions remedied by a specialist company.

11.5 Repair

WARNING

Improper repair work may pose a risk of death!

Improper maintenance may prevent the element from working properly and make it less safe to use.
► Always have repairs performed by a specialist company.

ATTENTION

Improper screw fixings may cause property damage.

Loose or faulty screws can prevent the hardware from working properly.

- Check that the individual screws are secure and seated correctly.
- Tighten or replace loose or faulty screws.
- Use only the suggested screws.

Repair work includes replacing and repairing components and is only necessary if components have become damaged after wear or as a result of external circumstances. The hardware must be secured reliably in order to ensure that the element works properly and is safe to use.

The following tasks must only be performed by a specialist company:

- All adjustment work on the hardware,
- Replacing hardware or hardware components,
- Installing and removing windows, doors or balcony doors

The specialist company must observe the following:

- Perform the necessary repair work properly, according to generally recognised engineering practice and in accordance with the applicable regulations.
- Do not perform makeshift repairs on worn or damaged components.
- Only use original or approved spare parts for repairs.

12 Dismantling

WARNING

Improper dismantling may pose a risk of death!

The sash may fall during dismantling.

- ▶ Secure the sash to prevent it from falling, e.g. by using two people.
- ▶ Always have dismantling work performed by a specialist company.

CAUTION

Physical strain may cause injury and damage to health.

Carrying and lifting heavy loads for extended periods leads to physical injury in the long term.

- ▶ When carrying or lifting loads, maintain an ergonomically correct posture. The maximum permissible load is 25 kg for men and 10 kg for women.

INFO

Unless otherwise stated, dismantling is performed in reverse order to installation.

12.1 Unhinging a sash with load transfer

1. Move the handle to the turn position.

Tilt&Turn hardware

TiltFirst hardware

2. Open the sash.

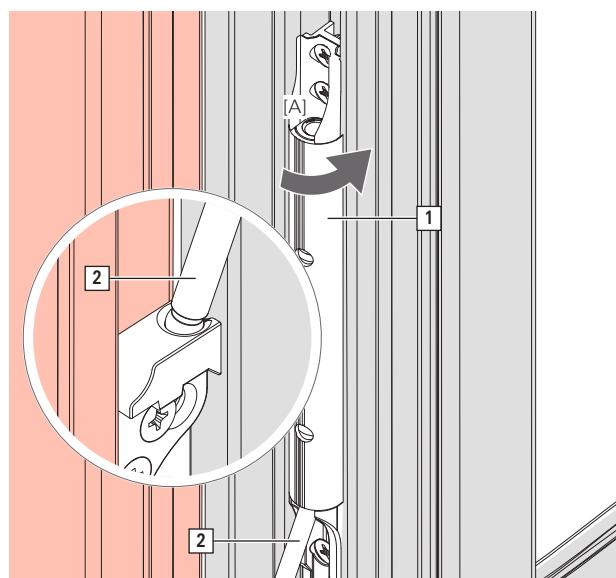

Relieve the load on the load transfer [1] [A] until the support rod [2] lies loosely in the frame component.

INFO

Unscrew the load transfer adjusting screw until the spring is fully released (the support rod becomes loose).

If the spring is not fully released, the sash cannot be rehung.

3. Push down on the lifting mishandling device (if fitted).

Move the handle to the tilt position.

Tilt&Turn hardware

TiltFirst hardware

Dismantling

Unhinging a sash without load transfer

- Secure the sash to prevent it from falling.

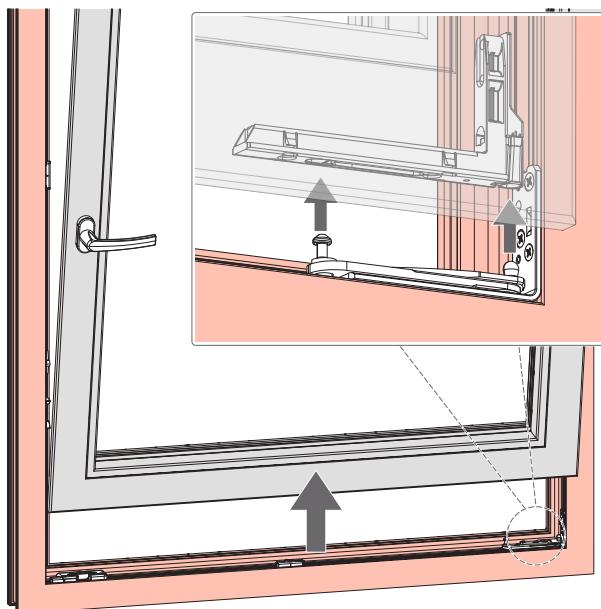

WARNING

An unsecured sash may pose a risk of death!

The sash may fall during installation if it is not securely connected to the frame.

- Secure the sash to prevent it from falling, e.g. by using two people.

- Unhinge the sash stay → *from page 211*.
- Push down on the lifting mishandling device and move the handle to the turn position.
- Close the sash.
- With the sash slightly tilted, lift it out of the pivot rest.

12.2 Unhinging a sash without load transfer

- Move the handle to the turn position.

Tilt&Turn hardware

TiltFirst hardware

2. Push down on the lifting mishandling device (if fitted).

Move the handle to the tilt position.

Tilt&Turn hardware

TiltFirst hardware

3. Secure the sash to prevent it from falling.

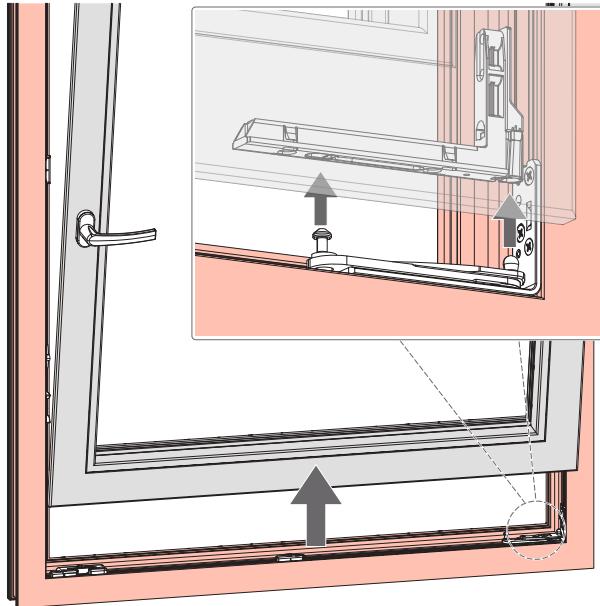

WARNING
An unsecured sash may pose a risk of death!

The sash may fall during installation if it is not securely connected to the frame.

- ▶ Secure the sash to prevent it from falling, e.g. by using two people.

4. Unhinge the sash stay → *from page 211*.
5. Push down on the lifting mishandling device and move the handle to the turn position.
6. Close the sash.
7. With the sash slightly tilted, lift it out of the pivot rest.

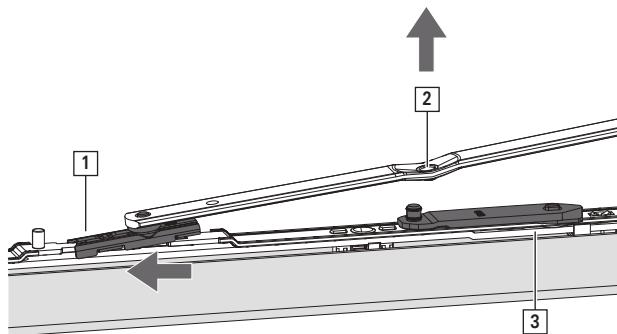

12.3 Unhinging the sash stay

Sash stay 350 and 500

1. Open the sash.

2. Detach the slider [1] and stay arm [2] from the stay guide [3].

3. Push down on the lifting mishandling device (if fitted) and move the handle to the tilt position.
4. Unhinge the sash stay and secure the sash to prevent it from falling.

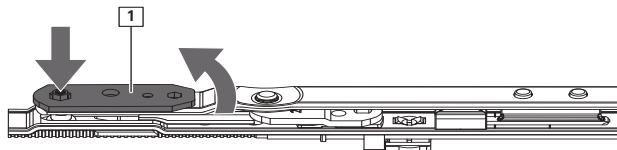

INFO

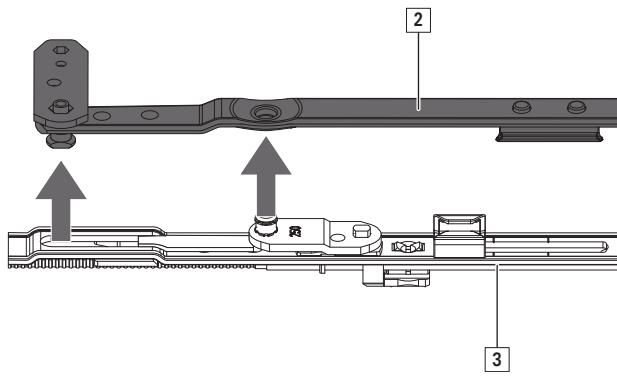

It is only possible to unhinge the sash once the anti-slam device has been removed.

Sash stay 250

1. Open the sash.
2. Open the retainer clasp [1] using a tool (e.g. hex key).

3. Detach the stay arm [2] from the stay guide [3].

12.4 Hardware components

Removing hardware components

1. Undo all screw connections.
2. Remove the hardware components.

3. Dispose of the hardware components properly.

13 Transport

13.1 Transporting elements and hardware

DANGER

Improper transport poses a risk of death!

Improper procedures for transporting, loading or unloading elements may cause serious injuries and glass breakage as a result of the elements swinging open, falling or becoming overloaded.

- ▶ Note the applicable accident prevention regulations.
- ▶ Note force application points and reaction forces.
- ▶ Prevent the sash from opening uncontrollably.
- ▶ Avoid jerky movements.
- ▶ Use suitable transportation means and protective devices.
- ▶ Watch out for protruding components.
- ▶ Transport heavy loads with two people and use suitable transportation means (such as an industrial truck).

CAUTION

Trapped limbs may result in injuries.

The transported goods can skid, open, close or fall during transportation tasks. This can result in limbs being trapped and seriously injured.

- ▶ Never reach near the scissor stays.
- ▶ Close the sash after installation and secure it in place for transport.
- ▶ Wear safety gloves and protective footwear.

CAUTION

Physical strain may cause injury and damage to health.

Carrying and lifting heavy loads for extended periods leads to physical injury in the long term.

- ▶ When carrying or lifting loads, maintain an ergonomically correct posture. The maximum permissible load is 25 kg for men and 10 kg for women.

Hardware is supplied to the specialist company as complete sets. The components are packaged accordingly for each shipment. The instructions for safely transporting the hardware are described below.

Observe the following basic instructions when transporting hardware:

- ▶ Transport larger scopes of delivery using appropriate transportation means (such as industrial trucks).
- ▶ Note the transport weight in order to select appropriate transportation means.
- ▶ Immediately check the delivery for completeness and transport damage on receipt.

INFO

Submit a complaint about any defects as soon as they are identified. Claims for damages may only be made within the reclamation period.

Use the following transportation means for support when transporting, loading and unloading larger scopes of delivery:

- Industrial trucks, e.g. forklifts, telescopic handlers, pallet trucks

- Lifting equipment, e.g. transport nets, carry straps, round slings
- Protective devices, e.g. edge protection, spacer blocks

INFO

Industrial trucks and lifting devices may only be operated by qualified persons.

INFO

Lifting equipment and protective devices may only be used if they are in full working order.

13.2 Storing the hardware

Store all hardware components as follows until they are installed:

- Dry and protected
- On a level surface
- Protected against sunlight

14 Disposal

14.1 Disposing of packaging

The hardware is supplied as complete sets together with the packaging. Once unpacked, the installation company or builder is responsible for disposing of the packaging properly. The packaging materials are produced in accordance with current environmental protection standards. The materials can be recycled separately.

Follow the basic instructions below for the proper disposal of packaging:

- ▶ Do not dispose of packaging in household waste.
- ▶ Hand over packaging at local waste collection points or recycling centres.
- ▶ Observe the national regulations on the disposal of recyclable materials.
- ▶ Contact the local authorities if necessary.

14.2 Disposing of hardware

Once the hardware is finished with, the end user or builder is responsible for properly disposing of the windows, doors or balcony doors and the hardware, including any accessories. Hardware is produced in accordance with current environmental protection standards. The materials can be recycled separately.

Follow the basic instructions below for the proper disposal of hardware:

- ▶ Observe the information and specifications for disposal contained in the other applicable documents.
- ▶ Separate hardware components from windows, doors or balcony doors.
- ▶ Do not dispose of hardware in household waste.
- ▶ Hand over hardware at local waste collection points or recycling centres.
- ▶ Observe the national regulations on the disposal of recyclable materials.
- ▶ Contact the local authorities if necessary.
